Consultation Draft: Targeted update of the OECD Guidelines for Multinational Enterprises and their Implementation Procedures
Background

The OECD Guidelines for Multinational Enterprises (the Guidelines) set out recommendations from governments to businesses for ensuring responsible business conduct in all areas where business interacts with society, including human rights, labour rights, environment, bribery, consumer interests, as well as disclosure, science and technology, competition, and taxation. The OECD Guidelines are complemented by Implementation Procedures, which set out the role and functions of the National Contact Points for Responsible Business Conduct.

The OECD Guidelines were last revised in 2011 and the OECD Working Party on Responsible Business Conduct (WPRBC) is currently working towards a targeted update of the Guidelines and Implementation Procedures to advance their uptake and promotion, as well as to ensure they remain fit for purpose.

PUBLIC CONSULTATION

The OECD is currently inviting interested stakeholders to comment on a consultation draft of potential updates. The public consultation is open to all interested stakeholders from all countries, including businesses, industry groups, civil society organisations, trade unions, as well as academia, interested citizens, international organisations and governmental experts (including from non-Adherent countries).

The public consultation will remain open until 10 February 2023.

CONSULTATION DRAFT ON THE OECD MNE GUIDELINES AND THEIR IMPLEMENTATION PROCEDURES

The consultation draft outlines potential updates to the Guidelines chapters and to their implementation procedures. The potential updates reflect discussion by the WPRBC but do not constitute agreed text. As a working document, the draft is subject to change, including but not limited to changes to incorporate feedback received in the course of this public consultation.

The targeted update is guided by a set of parameters set out by the WPRBC:

- the update excludes a wholesale revision of the Guidelines or a full redrafting of existing chapters
- potential updates are based on issues raised in the preceding stocktaking exercise and current understanding and practice by Adherents
- the update is further guided by the criteria of (i) ensuring coherence with OECD priorities and standards; (ii) enhancing the OECD’s leadership on RBC; (iii) building on achievements and strengths; and (iv) ensuring focus and proportionality.

Within these parameters, the consultation draft contains potential updates to all chapters of the Guidelines. However, the majority of potential updates occur in the chapter on Environment, the chapter on Science and Technology as well as in the Implementation Procedures concerning the National Contact Points for Responsible Business Conduct.

The consultation draft reproduces the OECD Guidelines for Multinational Enterprises [OECD/Legal/0144] and their Implementation Procedures and sets out annotated draft targeted updates to the text. Part I reproduces the chapters of the Guidelines and their Commentary. Part II reproduces the Implementation Procedures, namely the Council Decision and Procedural Guidance [OECD/Legal/0307] as well as the Commentary thereto. Throughout we use *track changes* in bold italics to indicate proposed additions. Text in strikethrough indicates proposed deletions. Text in *italics* only indicates text from the existing version of the Guidelines which has been moved to a different paragraph to improve readability.

Interested stakeholders are invited to submit comments through the consultation website. Please note that all written submissions will be made publicly available. For any questions, please contact RBC@oecd.org.

YOUR DATA PROTECTION RIGHTS

Any personal data you provide as part of this consultation, including your name and responses, will be protected consistent with the OECD Data Protection Rules. Please note that your submission will be made public indefinitely, as outlined above. Under the Rules, you have rights to access and rectify your personal data, as well as to object to its processing and request erasure in certain circumstances. To exercise these rights in connection with the consultation, please contact RBC@oecd.org. If you have further queries or complaints related to the processing of your personal data, please
contact the Data Protection Officer. If you need further assistance in resolving claims related to personal data protection you can contact the Data Protection Commissioner.
Part I: Targeted Updates to the OECD Guidelines for Multinational Enterprises

Preface

1. The OECD Guidelines for Multinational Enterprises (the Guidelines) are recommendations addressed by governments to multinational enterprises. The common aim of the governments adhering to the Guidelines is to encourage the positive contributions enterprises can make to economic, environmental, and social progress and to minimise the adverse impacts that may result from their operations. The Guidelines encourage the alignment of positive contributions that multinational enterprises can make to business conduct with sustainable development objectives related to economic, environmental and social progress and to minimise outcomes in the areas covered by the Guidelines. Responsible business conduct can enable the creation of a level playing field across global markets; foster a dynamic and well-functioning business sector, enhance the business contribution to sustainable development outcomes, including global solutions to address and respond to climate change. The Guidelines aim to ensure that the operations of enterprises are in harmony with government policies, to strengthen confidence between enterprises and the societies in which they operate, to help improve the investment climate and to enhance the contribution to sustainable development made by multinational enterprises.

2. The Guidelines are part of the OECD Declaration on International Investment and Multinational Enterprises [OECD/LEGAL/0144] the other elements of which relate to national treatment, conflicting requirements on enterprises, and international investment incentives and disincentives. The countries adhering to the Guidelines make a binding commitment to implement them take certain actions to further their effectiveness in accordance with the Decision of the OECD Council on the OECD Guidelines for Multinational Enterprises [OECD/LEGAL/0307]. For this purpose, National Contact Points for Responsible Business Conduct play a central role.

3. The Guidelines clarify the shared expectations for business conduct of the governments adhering to them and provide an authoritative point of reference for enterprises and for other stakeholders. They recommend that enterprises undertake risk-based due diligence to identify, prevent, mitigate and account for how they address actual and potential adverse impacts on matters covered by the Guidelines. In this regard, the Guidelines both complement and reinforce private and public efforts to define and implement responsible business conduct.

4. The Guidelines provide voluntary principles and standards for responsible business conduct consistent with applicable laws and internationally recognised standards. Matters covered by the Guidelines may be the subject of national law and international commitments. Governments have an important role to play in supporting effective implementation of the Guidelines, including by creating an enabling policy environment to drive, support, and promote responsible business practices, including in their role as economic actors. Governments are increasingly adopting policies aimed at promoting responsible business practices, including by using OECD standards on responsible business conduct to support comprehensive and common approaches for due diligence, thereby addressing uneven levels of implementation of
voluntary approaches. There is a continued demand for coherence across international standards on responsible business conduct and that governments co-operate with each other and with other actors to strengthen the international legal and policy framework in which business is conducted. The design of specific policies, legislation and other measures on responsible business conduct will be shaped by individual countries' political, administrative, and legal contexts.

5. International The political, economic, environmental, social, physical and technological environment for international business has experienced far-reaching structural and rapid change and the Guidelines themselves have evolved to reflect these changes. With In the past decades, international trade and finance has grown significantly as a share of the rise of service and knowledge-intensive industries and the expansion of the internet global economy, service and technology enterprises are playing an increasingly important role in the international marketplace. Large enterprises still account for a major share of international trade and investment, while cross-border trade and there is a trend toward large-scale international mergers. At the same time, foreign investment by small- and medium-sized enterprises has also increased and these enterprises now play a significant role in international markets. Multinational enterprises, like their domestic counterparts, have evolved to encompass a broader range of business arrangements and organisational forms. Technological developments as well as strategic alliances and closer relations with suppliers and contractors tend to blur the boundaries of the enterprise.

6. The rapid evolution in the structure of multinational enterprises is also reflected in their operations in the emerging and developing world, where foreign direct economies, whose share of cross-border trade and investment has grown is growing. In emerging and developing countries, multinational enterprises have diversified beyond primary production and extractive industries into manufacturing, assembly, domestic market development and services. Another key development is the emergence of multinational enterprises based in developing countries as major international investors.

7. The activities of multinational enterprises, through international trade and investment, have strengthened and deepened the ties that join the countries and regions of the world. These activities bring substantial benefits to home and host countries. These benefits accrue when multinational enterprises supply the products and services that through creation of better jobs, lower cost of living for consumers want to buy at competitive prices and when they provide fair, and better returns to suppliers of capital, for investors. Their trade and investment activities contribute to the efficient use of capital, technology and human and natural resources. They facilitate the safe transfer of technology among the regions of the world and the development of technologies that reflect local conditions. Through both formal training and on-the-job learning enterprises also promote the development of human capital and the creation of employment opportunities.

8. The nature, scope and speed of economic changes have presented new strategic challenges for enterprises and their stakeholders. Multinational enterprises have the opportunity to increasingly implement best practice policies for business models that pursue sustainable development that seek to ensure and support coherence between economic, environmental and social objectives. The ability of multinational enterprises to promote sustainable development is greatly enhanced when trade and investment are conducted in a context of open, competitive and appropriately regulated markets with rules of law and protection of civic space.

9. Many multinational enterprises have demonstrated that respect for high standards of business conduct can enhance growth. Competitive forces are intense and multinational enterprises face a variety of legal, social and regulatory settings. In this context, some enterprises may be tempted to neglect appropriate principles and standards of conduct in an attempt to gain undue competitive advantage. Such practices by the few may call into question the reputation of the many and may give rise to public concerns.

10. Many enterprises have responded to these public concerns by developing internal programmes, guidance and management systems that underpin their commitment to good corporate citizenship, good practices and good business and employee conduct. Some of them have called upon consulting, auditing and certification services, contributing to the accumulation of expertise in these areas.
11. Many enterprises have responded by setting up due diligence processes to assess and address environmental, social and governance impacts of their operations underpinning their commitment to good corporate citizenship, good practices and good business and employee conduct. Enterprises have also promoted social dialogue on what constitutes responsible business conduct and have worked with stakeholders, including in the context of multi-stakeholder initiatives, to develop guidance for responsible business conduct.

12. The adoption of the OECD Guidelines in 1976, and their subsequent updates, reflect increased demand on business to follow principles and standards on responsible business conduct. The beginnings of this development can be dated to the work of the International Labour Organisation in the early twentieth century. The adoption by the United Nations in 1948 of the Universal Declaration of Human Rights was another landmark event. It was followed by the ongoing development of standards relevant for many areas of responsible business conduct a process that continues to this day. The OECD has contributed in important ways to this process through the development of standards covering such areas as the environment, the fight against corruption, consumer interests, corporate governance, science, technology and innovation and taxation.

13. The Guidelines remain the leading international instrument on responsible business conduct. The countries adhering the Guidelines are committed to co-operating with each other and with other countries to further their implementation in partnership with the many businesses, trade unions and other non-governmental organisations that are working in their own ways toward the same end. Governments can help by providing effective domestic policy frameworks that include stable macroeconomic policy, non-discriminatory treatment of enterprises, appropriate regulation and prudential supervision, an impartial system of courts and law enforcement and efficient and honest public administration. Governments can also help by maintaining and promoting appropriate standards and policies in support of sustainable development and by engaging in ongoing reforms to ensure that public sector activity is efficient and effective. Governments adhering to the Guidelines are committed to continuous improvement of both domestic and international policies with a view to improving the welfare and living standards of all people.

Chapter I. Concepts and Principles

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter I. Concepts and Principles

Full edited text of Chapter I. Concepts and Principles

1. The Guidelines are recommendations jointly addressed by governments to multinational enterprises. They provide principles and standards of good practice consistent with applicable laws and internationally recognised standards. Observance of the Guidelines by enterprises is voluntary and not legally enforceable. Nevertheless, some matters covered by the Guidelines may also be regulated by national law or international commitments.

2. Obeying domestic laws is the first obligation of enterprises. The Guidelines are not a substitute for nor should they be considered to override domestic law and regulation. While the Guidelines extend beyond the law in many cases, they should not and are not intended to place an enterprise in situations where it faces conflicting requirements. However, in countries where domestic laws and regulations conflict with, or set lower expectations than, the principles and standards of the Guidelines, enterprises should seek ways to honour such principles and standards to the fullest extent which does not place them in violation of domestic law.

3. Since the operations of multinational enterprises extend throughout the world, international cooperation in this field should extend to all countries. Governments adhering to the Guidelines encourage the enterprises operating in or from their territories to observe the Guidelines wherever they operate, while taking into account the particular circumstances of each host country.

4. A precise definition of multinational enterprises is not required for the purposes of the Guidelines. These enterprises operate in all sectors of the economy. They usually comprise companies or other entities established in more than one country and so linked that they may co-ordinate their operations in various ways. or, companies or other entities conducting a significant amount of business in more than one country. While one or more of these entities may be able to exercise a significant influence over the activities of others, entities in a group, their degree of autonomy within the group enterprise may vary widely from one multinational enterprise to another. Ownership may be private, State, or mixed. The Guidelines are addressed to all the entities within the multinational enterprise (parent companies and/or local entities). According to the actual distribution of responsibilities among them, the different entities are expected to cooperate and to assist one another to facilitate observance of the Guidelines. The Guidelines allow for a broad and flexible approach in identifying which entities may be considered multinational enterprises for the purposes of the Guidelines. The international nature of an enterprise’s structure or activities and its commercial form, purpose, or activities are relevant considerations in this respect.

5. The Guidelines are not aimed at introducing differences of treatment between multinational and domestic enterprises; they reflect good practice for all. Accordingly, multinational and domestic enterprises are subject to the same expectations in respect of their conduct wherever the Guidelines are relevant to both.

6. Governments wish to encourage the widest possible observance of the Guidelines. While it is acknowledged that small- and medium-sized enterprises may not have the same capacities as larger enterprises, governments adhering to the Guidelines nevertheless encourage them to observe the Guidelines’ recommendations to the fullest extent possible.

7. Governments adhering to the Guidelines should not use them for protectionist purposes nor use them in a way that calls into question the comparative advantage of any country where multinational enterprises invest.

8. Governments have the right to prescribe the conditions under which multinational enterprises operate within their jurisdictions, subject to international law. The entities of a multinational enterprise located in various countries are subject to the laws applicable in these countries. When multinational enterprises are subject to conflicting requirements by adhering countries or third
countries, the governments concerned are encouraged to co-operate in good faith with a view to resolving problems that may arise.

9. Governments adhering to the Guidelines set them forth with the understanding that they will fulfil their responsibilities to treat enterprises equitably and in accordance with international law and with their contractual obligations.

10. The use of appropriate international dispute settlement mechanisms, including arbitration, is encouraged as a means of facilitating the resolution of legal problems arising between enterprises and host country governments.

11. Governments adhering to the Guidelines will implement them and encourage their use. They will establish National Contact Points that promote the Guidelines and act as a forum for discussion of all matters relating to the Guidelines. The adhering Governments will also participate in appropriate review and consultation procedures to address relevant concerns regarding interpretation and implementation of the Guidelines and to maintain their continued relevance in a changing world.
Chapter II. General Policies

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter II. General Policies

Enterprises should take fully into account established policies in the countries in which they operate, and consider the views of other stakeholders. In this regard:

A. Enterprises should:

1. Contribute to economic, environmental and social progress with a view to achieving sustainable development.

2. Respect the internationally recognised human rights of those affected by their activities.

3. Encourage local capacity building through close co-operation with the local community, including business interests, as well as developing the enterprise’s activities in domestic and foreign markets, consistent with the need for sound commercial practice.

4. Encourage human capital formation, in particular by creating employment opportunities and facilitating training opportunities for employees.

5. Ensure transparency and integrity in lobbying activities and refrain from seeking or accepting exemptions not contemplated in the statutory or regulatory framework related to human rights, environmental, health, safety, labour, taxation, financial incentives, or other issues.

6. Support and uphold good corporate governance principles and develop and apply good corporate governance practices, including throughout enterprise groups.

7. Develop and apply effective self-regulatory practices and management systems that foster a relationship of confidence and mutual trust between enterprises and the societies in which they operate.

8. Promote awareness of and compliance by workers employed by multinational enterprises with respect to company policies through appropriate dissemination of these policies, including through training programmes.

9. Refrain from discriminatory or disciplinary action or applying undue pressure against workers, 
\textit{trade union representatives or other worker representatives} who make bona fide reports to management or, as appropriate, to the competent public authorities, on practices that contravene the law, the Guidelines or the enterprise’s policies.

10. (new paragraph) Refrain from applying undue pressure or reprisals against any persons or groups who monitor or report practices of the enterprise or entities with which it has a business relationship that contravene the law, or are inconsistent with the Guidelines, or the enterprise’s policies, including but not limited to submitters of Specific Instances, members of the press, whistleblowers, and human rights defenders, and those working on environmental matters referred to as environmental defenders.

11. (Originally paragraph A.10) Carry out risk-based due diligence, for example by incorporating it into their enterprise risk management systems, to identify, prevent and mitigate actual and potential adverse impacts as described in paragraphs 11 and 12, and account for how these impacts are addressed. The nature and extent of due diligence depend on the circumstances of a particular situation.

12. (Originally paragraph A.11) Avoid causing or contributing to adverse impacts on matters covered by the Guidelines, through their own activities, and address such impacts when they occur.

13. (Originally paragraph A.12) Seek to prevent or mitigate an adverse impact where they have not contributed to that impact, when the impact is nevertheless directly linked to their operations, products or services by a business relationship. This is not intended to shift responsibility from the entity causing an adverse impact to the enterprise with which it has a business relationship.
14. (New paragraph) Provide for or co-operate through legitimate processes in the remediation of adverse impacts where an enterprise has caused or contributed to these impacts.

15. (Originally paragraph A.13) In addition to addressing adverse impacts in relation to matters covered by the Guidelines, encourage, where practicable, entities with which an enterprise has a business relationship partners, including suppliers and sub-contractors, investee companies, clients, buyers, and joint venture partners to apply principles of responsible business conduct compatible with the Guidelines.

16. (Originally paragraph A.14) Engage meaningfully with relevant stakeholders in order to provide opportunities for their views to be taken into account with respect to, in relation to planning and decision making for projects or other activities that may significantly impact local communities.

17. Abstain from any improper involvement in local political activities, such as engaging in acts of corruption or attempting to influence the design, implementation, execution and evaluation of public policies and regulations administered by public officials, by providing covert, deceptive or misleading evidence or data.

B. Enterprises are encouraged to

1. Support, as appropriate to their circumstances, cooperative efforts in the appropriate fora to promote Internet Freedom through respect of freedom of expression, assembly and association online.

2. Engage in or support, where appropriate, private or multi-stakeholder initiatives and social dialogue on responsible supply chain management and business conduct while ensuring that these initiatives take due account of their social and economic effects on developing countries and of existing internationally recognised standards.

Commentary on General Policies

1. The General Policies chapter of the Guidelines is the first to contain specific recommendations to enterprises. As such it is important for setting the tone and establishing common fundamental principles for the specific recommendations in subsequent chapters.

2. Enterprises are encouraged to co-operate with governments in the development and implementation of policies and laws. Considering the views of other stakeholders in society, which includes the local community and those affected or potentially affected by their activities as well as business interests, can enrich this process. It is also recognised that governments should be transparent in their dealings with enterprises, and consult with business on these same issues. Enterprises, social partners and other stakeholders such as civil society organisations and trade unions should be viewed as partners with government in the development and use of both voluntary and regulatory approaches (of which the Guidelines are one element) to policies affecting them.

3. There should not be any contradiction between the activity of multinational enterprises (MNEs) and sustainable development, and the Guidelines are meant to foster complementarities in this regard. Indeed, links among economic, social, and environmental progress are a key means for furthering the goal of sustainable development.4

4. One of the most broadly accepted definitions of sustainable development from the 1987 World Commission on Environment and Development (the Brundtland Commission) is “Development that meets the needs of the present without compromising the ability of future generations to meet their own needs”. The United Nations has set targets to eradicate global poverty, protect the planet, and ensure that all people enjoy peace and prosperity.

5. The Guidelines also acknowledge and encourage the contribution that MNEs can make to local capacity building as a result of their activities in local communities. Similarly, the recommendation on human capital formation is an explicit and forward-looking recognition of the contribution to
individual human development that MNEs can offer their employees, and encompasses not only hiring practices, but training and other employee development as well. Human capital formation also incorporates the notion of non-discrimination in hiring practices as well as promotion practices, life-long learning and other on-the-job training.

6. **Importantly, when engaging in public advocacy, enterprises should take due account of the OECD Recommendation of the Council on Principles for Transparency and Integrity in Lobbying [OECD/LEGAL/0379], while maintaining the ability to participate freely in public discourse. Enterprises should ensure that their lobbying activities are coherent with their commitments and goals on matters covered by the Guidelines.** The Guidelines also recommend that, in general, enterprises avoid making efforts to secure exemptions not contemplated in the statutory or regulatory framework related to human rights, environmental, health, safety, labour, taxation and financial incentives among other issues, without infringing on an enterprise’s right to seek changes in the statutory or regulatory framework. The words “or accepting” also draw attention to the role of the State in offering these exemptions. While this sort of provision has been traditionally directed at governments, it is also of direct relevance to MNEs. Importantly, however, there are instances where specific exemptions from laws or other policies can be consistent with these laws for legitimate public policy reasons. The environment and competition policy chapters provide examples.

7. The Guidelines recommend that enterprises apply good corporate governance practices drawn from the **G20/OECD Principles of Corporate Governance [OECD/LEGAL/0413].** The Principles call for the protection and facilitation of the exercise of shareholder rights, including the equitable treatment of shareholders. Enterprise should recognise the rights of stakeholders established by law or through mutual agreements and encourage active co-operation with stakeholders in creating wealth, jobs, and the sustainability of financially sound enterprises.

8. The Principles call on the board of the parent entity to ensure the strategic guidance of the enterprise, the effective monitoring of management and to be accountable to the enterprise and to the shareholders, while taking into account the interests of stakeholders. In undertaking these responsibilities, the board needs to ensure the integrity of the enterprise’s accounting and financial reporting systems, including independent audit, appropriate control systems, in particular, risk management, and financial and operational control, and compliance with the law and relevant standards.

9. The Principles extend to enterprise groups, although boards of subsidiary enterprises might have obligations under the law of their jurisdiction of incorporation. Compliance and control systems should extend where possible to these subsidiaries. Furthermore, the board’s monitoring of governance includes continuous review of internal structures to ensure clear lines of management accountability throughout the group.

10. State-owned multinational enterprises are subject to the same recommendations as privately-owned enterprises, but public scrutiny is often magnified when a State is the final owner. The OECD Guidelines on Corporate Governance of State-Owned Enterprises are a useful and specifically tailored guide for these enterprises and the recommendations they offer could significantly improve governance.

11. Although primary responsibility for improving the legal and institutional regulatory framework lies with governments, there is a strong business case for enterprises to implement good corporate governance.

12. An increasing network of non-governmental self-regulatory instruments and actions address aspects of corporate behaviour and the relationships between business and society. Interesting developments in this regard are being undertaken in the financial sector. Enterprises recognise that their activities often have social and environmental implications. The institution of self-regulatory practices and management systems **and participation in related multi-stakeholder initiatives** by enterprises sensitive to reaching these goals – thereby contributing to sustainable development – is an illustration of this. **Self-regulatory practices and multi-stakeholder initiatives should be credible and transparent.** Where such initiatives are focused on responsible business conduct due diligence, alignment with relevant international standards such as the Guidelines can foster greater effectiveness while reducing complexity and cost for businesses engaged in such initiatives. In turn, developing such practices can further constructive relationships between enterprises and the societies in which they operate. **Although enterprises can collaborate at an industry or multistakeholder level.**
they always remain individually responsible for ensuring that their due diligence is carried out effectively.

13. Following from effective self-regulatory practices, as a matter of course, enterprises are expected to promote employee awareness of company policies. Safeguards to protect bona fide “whistle-blowing” activities are also recommended, including protection of employees who, in the absence of timely remedial action or in the face of reasonable risk of negative employment action, report practices that contravene the law to the competent public authorities. While of particular relevance to internal controls, ethics and compliance programmes related to anti-corruption, discussed in Chapter VII, and environmental initiatives, such protection is also relevant to other recommendations in the Guidelines.

14. (New paragraph) Business and civil society both depend on a shared civic space that includes freedom of expression, association and assembly, as well as the rule of law, which in turn create an enabling environment for the implementation of the Guidelines. In this respect, enterprises should refrain from applying undue pressure or reprisals against any persons or groups who monitor or report practices of the enterprise that contravene the law or are inconsistent with the Guidelines, including through developing appropriate safeguards. Pressure is undue when it is retaliatory or discriminatory or based solely on the act or content of reporting or monitoring. This includes threats, reputational smears, slurs, harassment, intimidation, surveillance, Strategic lawsuits against public participation (SLAPP suits) intended for the sole purpose of censoring, intimidating or silencing critics, criminalisation of lawful activities, physical attacks and death.

15. (Originally paragraph 14 of commentary) For the purposes of the Guidelines, due diligence is understood as the process through which enterprises can identify, prevent, mitigate and account for how they address their actual and potential adverse impacts as an integral part of business decision-making and risk management systems. To that end the OECD Due Diligence Guidance Business Conduct sets out a due diligence framework that countries have approved and committed to actively support and monitor. It outlines the following measures: 1. embedding responsible business conduct into policies and management systems; 2. identifying and assessing actual and potential adverse impacts of the enterprise’s operations, products or services; 3. ceasing, preventing and mitigating adverse impacts; 4. tracking implementation and results; 5. communicating how impacts are addressed; and 6. providing for or cooperating in remediation when appropriate. It also suggests practical actions to implement these measures. Not every practical action mentioned in the due diligence guidance will be appropriate for every situation. The OECD due diligence and OECD sector due diligence guidance help companies to understand and implement due diligence as foreseen in the Guidelines. They also seek to promote a common understanding among governments and stakeholders on due diligence for RBC.

16. Due diligence can be included within broader enterprise risk management systems, provided that it goes beyond simply identifying and managing material risks to the enterprise itself, to include the risks of adverse impacts related to matters covered by the Guidelines. Potential impacts are to be addressed through prevention or mitigation, while actual impacts are to be addressed through remediation. The Guidelines concern those adverse impacts that are either caused or contributed to by the enterprise, or are directly linked to their operations, products or services by a business relationship, as described in paragraphs A.11 and A.12. Due diligence can help enterprises avoid the risk of such adverse impacts. For the purposes of this recommendation, ‘contributing to’ an adverse impact should be interpreted as a substantial contribution, meaning an activity that causes, facilitates or incentivises another entity to cause an adverse impact and does not include minor or trivial contributions. An enterprise’s relationship to adverse impact is not static. It may change, for example as situations evolve and depending upon the degree to which due diligence and steps taken to address identified risks and impacts decrease the risk of the impacts occurring. The term “business relationship” includes relationships with business partners, investee companies, clients, and joint venture partners, entities in the supply chain which supply products or services that contribute to the enterprise’s own operations, products or services from the enterprise, and any other non-State or State entities directly linked to its business operations, products or services.

17. (Originally part of paragraph 14) The recommendation in paragraph A.11 applies to those matters covered by the Guidelines that are related to adverse impacts associated with an enterprise’s operations, products and services. The recommendation in paragraph A.11 does not apply to the chapters on Science and Technology Competition and Taxation. Throughout
the Guidelines recommendations related to due diligence and identifying, preventing, and mitigating adverse impacts and accounting for how such impacts are addressed should be read in line with A 11-13 and related commentary.

18. (Originally paragraph 15) The nature and extent of due diligence, such as the specific steps to be taken, appropriate to a particular situation will be affected by factors such as the size of the enterprise, context of its operations, the specific recommendations in the Guidelines, and the severity of its adverse impacts. In this respect the measures that an enterprise takes to conduct due diligence should be commensurate to the severity and likelihood of the adverse impact. Where it is not feasible to address all identified impacts at once, an enterprise should prioritise the order in which it takes action based on the severity and likelihood of the adverse impact. For the assessment of adverse impacts arising from downstream business relationships, prioritisation should be based on any known or foreseeable circumstance related to the use of the product or service provided in accordance with its intended purpose, or under conditions of reasonably foreseeable improper use or misuse, which may give rise to adverse impacts. Specific recommendations for human rights due diligence related to specific issues are provided in Chapter IV-VIII.

19. (Originally paragraph 16) Where enterprises have large numbers of suppliers and other business relationships, they are encouraged to identify general areas where the risk of adverse impacts is most significant and, based on this risk assessment, prioritise suppliers these areas for due diligence in line with the measures outlined in paragraph 17.

20. (Originally paragraph 17) To avoid causing or contributing to adverse impacts on matters covered by the Guidelines through their own activities includes their activities in the supply chain, Business relationships in the supply chain take a variety of forms including, for example, financing, supplying and buying, franchising, licensing or subcontracting. Business relationships may include relationships with entities beyond contractual relationships, such as sub-suppliers, as well as with buyers and users of products and services. Entities with which an enterprise has a business relationship may or may not be in the supply chain as often multinational enterprises themselves and, by virtue of this fact, those be operating in or from the countries adhering to the Declaration are covered by the Guidelines.

21. (Originally paragraph 18) In the context of its supply chain If the enterprise identifies a risk of causing an adverse impact, then it should take the necessary steps to cease or prevent that impact.

22. (Originally paragraph 19) If the enterprise identifies a risk of contributing to an adverse impact, then it should take the necessary steps to cease or prevent its contribution and use its leverage to mitigate any remaining impacts to the greatest extent possible. Leveraged is considered to exist where the enterprise has the ability to effect change in the wrongful practices of the entity that causes the harm.

23. (Originally paragraph 20) Meeting the expectation in paragraph A.13 would entail an enterprise, acting alone or in co-operation with other entities, as appropriate, to use its leverage to influence the entity causing the adverse impact to prevent or mitigate that impact.

24. (Originally paragraph 21) The Guidelines recognise that there are practical limitations on the ability of degree of leverage enterprises have to effect change in the behaviour of their entities with which they have suppliers business relationships. These are related to product and/or service characteristics, the number of suppliers and other business relationships, the structure and complexity of the supply chain, the position of the enterprise vis-à-vis entities with which it has a suppliers business relationship or other entities in the supply chain. Where an enterprise does not have sufficient leverage, it should consider ways to enhance its leverage. For example, in the context of some business relationships once a transaction has been concluded, an enterprises’ leverage may be significantly reduced and as such it is important that enterprises make efforts to exercise leverage before the conclusion of a transaction. However, Enterprises can also influence suppliers entities with which it has business relationships, for example, through contractual arrangements support, training and capacity building; engagement to urge them to prevent and/or mitigate impacts; building expectations around responsible business conduct and due diligence specifically into commercial contracts such as management contracts, pre-qualification requirements for potential suppliers, voting trusts, and license or franchise agreements; linking business incentives with performance on responsible business conduct; engagement with regulators and policymakers on responsible business conduct issues; communicating the possibility of responsible disengagement if expectations around responsible business
consequence are not respected, collaborating with other enterprises (at sectoral, risk or country level) to pool leverage and implementing common standards of responsible business conduct. Other factors relevant to determining the appropriate response to the identified risks include the severity and probability of adverse impacts and how crucial that supplier is to the enterprise.

25. (Originally paragraph 22) Appropriate responses with regard to the business relationship may include continuation of the relationship with a supplier throughout the course of risk mitigation efforts; temporary suspension of the relationship while pursuing ongoing risk mitigation; or, as a last resort, responsible disengagement from with the supplier a business relationship either after failed attempts at mitigation, or where the enterprise deems mitigation not feasible, or because of the severity of the adverse impact. The enterprise should also take into account potential social and economic adverse impacts related to the decision to disengage and consult with stakeholders in a timely manner. Enterprises should take reasonable and appropriate measures to mitigate adverse impacts related to disengagement.

26. (Originally paragraph 23) Enterprises may also engage with suppliers and other entities with which they have business relationships entities in the supply chain to improve their performance, in co-operation with other stakeholders, including through personnel training and other forms of capacity building and, to support the integration of principles of responsible business conduct compatible with the Guidelines into their business practices. Where entities with which an enterprise has a business relationship suppliers have multiple customers and are potentially exposed to conflicting requirements imposed, for example by different buyers, or service providers, enterprises are encouraged, with due regard to anti-competitive concerns, to participate in industry-wide collaborative efforts with other enterprises with which they share common suppliers to coordinate due diligence supply chain policies and risk management strategies, including through information-sharing.

27. (Originally paragraph 24) Enterprises are also encouraged to participate in private or multi-stakeholder initiatives and social dialogue on responsible business conduct, responsible supply chain management, such as those undertaken as part of the proactive agenda pursuant to the Decision of the OECD Council on the OECD Guidelines for Multinational Enterprises and the attached Procedural Guidance.

28. (Originally paragraph 25) Meaningful stakeholder engagement is a key component of the due diligence process. In some cases stakeholder engagement may also be a right in and of itself. Stakeholder engagement involves interactive processes of engagement with relevant stakeholders, through, for example, meetings, hearings or consultation proceedings. Relevant stakeholders are persons or groups, or their legitimate representatives, who are or could be adversely impacted by the enterprise’s operations, activities, products, or services. Meaningful stakeholder engagement refers to ongoing engagement with stakeholders that is two-way, conducted in good faith by the participants on both sides and responsive to stakeholders’ views. To ensure stakeholder engagement is meaningful and effective, it is important to identify and remove potential barriers to engaging with stakeholders in positions of vulnerability or marginalisation. The OECD Due Diligence Guidance for Responsible Business Conduct and relevant OECD sector specific guidance includes practical support for enterprises on carrying out stakeholder engagement including as part of an enterprise’s due diligence process. Effective stakeholder engagement is characterised by two-way communication and depends on the good faith of the participants on both sides. This engagement is can be particularly helpful important in the planning and decision-making concerning projects or other activities involving, for example, the intensive use of land or water, which could significantly affect local communities, including groups with traditional ties to particular lands and waters.

29. Paragraph B.1 acknowledges an important emerging issue. It does not create new standards, nor does it presume the development of new standards. It recognises that enterprises have interests which will be affected and that their participation along with other stakeholders in discussion of the issues involved can contribute to their ability and that of others to understand the issues and make a positive contribution. It recognises that the issues may have a number of dimensions and emphasises that co-operation should be pursued through appropriate fora. It is without prejudice to positions held by governments in the area of electronic commerce at the World Trade Organisation (WTO). It is not intended to disregard other important public policy interests which may relate to the use of the internet which would need to be taken into account. Finally, as is the case with the Guidelines in general, it is not intended to create conflicting requirements for enterprises consistent with paragraphs 2 and 8 of the Concepts and Principles Chapter of the Guidelines.
Some countries have referred to the 2005 Tunis Agenda for the Information Society in this regard.

Finally, it is important to note that self-regulation and other initiatives in a similar vein, including the Guidelines, should not unlawfully restrict competition, nor should they be considered a substitute for effective law and regulation by governments. It is understood that MNEs should avoid potential trade or investment distorting effects of codes and self-regulatory practices when they are being developed.
Chapter III. Disclosure

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter III. Disclosure

(text to illustrate potential edits is in bold and italics for new text and strike-out for deleted text)

Full edited text of Chapter IV. Disclosure*

*Disclaimer: the review of this Chapter is subject to alignment with the G20/OECD Principles of Corporate Governance which are currently under review.

1. **Enterprises should take fully into account established disclosure policies in the countries in which they operate, and consider the views and informational requirements of shareholders and other relevant stakeholders.** Enterprises should ensure that timely and accurate information is disclosed on all material matters regarding their activities, structure, financial situation, performance, ownership and governance. This information should be disclosed for the enterprise as a whole, and, where appropriate, along business lines or geographic areas. Disclosure policies of enterprises should be tailored to the nature, size and location of the enterprise, with due regard taken of costs, business confidentiality and other competitive concerns.

2. Disclosure policies of enterprises should include, but not be limited to, material information on:
   a) the financial and operating results of the enterprise;
   b) enterprise objectives;
   c) major share ownership and voting rights, including **beneficial owners**, the structure of a group of enterprises and intra-group relations, as well as control enhancing mechanisms;
   d) remuneration policy for members of the board and key executives, **as well as remuneration levels or amounts**, and information about **the composition of the board and its** members, including qualifications, the selection process, other enterprise directorships and whether each board member is regarded as independent by the board;
   e) related party transactions;
   f) foreseeable risk factors;
   g) issues regarding workers and other stakeholders;
   h) governance structures and policies, in particular, the **extent of compliance with national content of any corporate governance codes or policies and its the process by which they are implemented** implementation process;
   i) **debt contracts, including the risk of non-compliance with covenants.**

3. Enterprises are encouraged to communicate additional information that could include: It is also important that enterprises communicate responsible business conduct information including as part of their responsibility to carry out due diligence. Some of this information may also be material under paragraph 2. Responsible business conduct information includes:
   a) value statements or statements of business conduct intended for public disclosure including, depending on its relevance for the enterprise’s activities, information on the enterprise’s **policies on responsible business conduct issues that articulate** the enterprise’s **commitments to the principles and standards contained in the** relating to matters covered by the Guidelines, and its plans for implementing due diligence;
   b) policies and other codes of conduct to which the enterprise subscribes, their date of adoption and the countries and entities to which such statements apply, **and information on measures taken to embed policies on RBC issues into the enterprise’s management and oversight bodies;**
   c) **the enterprise’s identified areas of significant impacts or risks, the adverse impacts or risks identified, prioritised and assessed, as well as the prioritisation criteria;**
d) its performance in relation to these [statements and codes in paragraph 3(a) and the codes in paragraph (b) including the actions taken to prevent or mitigate risks or impacts identified in paragraph 3(c), including where possible estimated timelines and benchmarks for improvement and their outcomes, including the enterprise’s provision of or co-operation in any remediation;

e) information on internal audit, risk management and legal compliance systems;

f) information on relationships with workers and other stakeholders;

g) Additional information in line with disclosure recommendations on RBC information is provided in Chapters IV and VI.

4. Enterprises should apply high quality standards for accounting, and financial as well as environmental and social reporting where they exist, and refrain from publication of inaccurate or misleading information. The standards or policies under which information is compiled and published should be reported. An annual audit should be conducted by an independent, competent and qualified auditor in order to provide an external and objective assurance to the board and shareholders that all reported financial information fairly represents the financial position and performance of the enterprise in all material respects. In order to enhance the credibility of responsible business conduct information, enterprises may seek external assurance or audit of such information.

Commentary on Disclosure

28. The purpose of this Chapter is to help build an environment of transparency and accountability around the operations of multinational enterprises, thereby supporting financial stability, business integrity, and sustainable and inclusive economic growth, encourage improved understanding of the operations of multinational enterprises. In order to help build such an environment, clear and complete information on enterprises is important to a variety of users ranging from shareholders and the financial community to other constituencies such as workers, local communities, special interest groups, governments and society at large. To improve public understanding of enterprises and their interaction with society and the environment, enterprises should be transparent in their operations and responsive to the public’s increasingly sophisticated demands for information.

29. The information highlighted in this chapter addresses disclosure in two areas. The first set of disclosure recommendations is identical to disclosure items outlined in the G20/OECD Principles of Corporate Governance [OECD/LEGAL/0413]. Their related annotations provide further guidance and the recommendations in the Guidelines should be construed in relation to them. The first set of disclosure recommendations focus mainly on publicly traded enterprises may be supplemented by a second set of disclosure recommendations which enterprises are encouraged to follow and information which is considered material if it can reasonably be expected to influence an investor’s assessment of a company’s value, investment or voting decision. To the extent that they are deemed applicable in light of the nature, size and location of enterprises they should also be a useful tool to improve corporate governance in non-traded enterprises; for example, privately held or State-owned enterprises. This first set of disclosure recommendations calls for timely and accurate disclosure on all material matters regarding the corporation, including the financial situation, performance, ownership and governance of the company. Companies are also expected to disclose sufficient information on the remuneration of board members and key executives (either individually or in the aggregate) for investors and, where relevant, other stakeholders to properly assess the costs and benefits of remuneration plans and the contribution of incentive schemes, such as stock option schemes, to performance. Related party transactions and material foreseeable risk factors are additional relevant information that should be disclosed, as well as material issues regarding workers and other stakeholders.

30. The Guidelines include a second set of disclosure recommendations on responsible business conduct information including the enterprise’s actual or potential adverse impacts on people, the environment and society, and related due diligence processes, which may be material to
an investor's decision making and which also may be relevant for a broader set of stakeholders, including workers, worker representatives, local communities and civil society, among others. Several jurisdictions allow or require the consideration of stakeholder interests and many enterprises provide information on a broader set of topics than financial performance, and consider disclosure of such information a method by which they can demonstrate a commitment to and performance on sustainable business practices more generally, socially acceptable practices. In some cases, this second type of disclosure – or communication with the public and with other parties directly affected by the enterprise’s activities or business relationships – may pertain to entities that extend beyond those covered in the enterprise’s financial accounts. For example, it may also cover information on the activities of subcontractors and suppliers or of joint venture partners. Disclosure recommendations are not expected to place unreasonable administrative or cost burdens on enterprises. Nor are enterprises expected to disclose information that may endanger their competitive position unless disclosure is necessary to fully inform the investment decision and to avoid misleading the investor. In order to determine what information should be disclosed at a minimum, the Guidelines use the concept of materiality. Material information can be defined as information whose omission or misstatement could influence the economic decisions taken by users of information.

31. The two sets of disclosures in paragraph 2 and paragraph 3 are interrelated and some information may be relevant for both. In order to determine what information should be disclosed under paragraph 2, the Guidelines use the concept of materiality. Information under paragraph 2, including related to RBC issues and due diligence, should be considered material if it can reasonably be expected to influence an investor’s assessment of a company’s value, investment or voting decisions. The determination of which information is material may vary over time, and according to the local context, company specific circumstances and jurisdictional requirements. Some jurisdictions may also require or recommend disclosing sustainability matters critical to a company’s key stakeholders or a company’s influence on non-diversifiable risks. The Guidelines also generally note that information should be prepared and disclosed in accordance with high-quality standards of accounting and financial and non-financial disclosure. This significantly improves the ability of investors to monitor the enterprise by providing increased reliability and comparability of reporting, and improved insight into its performance. The annual independent audit recommended by the Guidelines should contribute to an improved control and compliance by the enterprise.

32. In relation to information disclosed under paragraph 2, sustainability risks that may not seem to be financially material but that are relevant to society may reasonably be expected to become financially material for a company at some point.

33. Users of financial information and market participants need information on material risks that may include: risks that are specific to the industry or the geographical areas in which the company operates; dependence on commodities and value chains; financial market risks including interest rate or currency risk; risks related to derivatives and off-balance sheet transactions; business conduct risks; digital security risks; compliance risks; and responsible business conduct risks, notably climate-related risks.

34. Disclosure recommendations are not expected to place unreasonable administrative or cost burdens on enterprises. Nor are enterprises expected to disclose information that
may endanger their competitive position unless disclosure is necessary to fully inform an investor’s decisions and to avoid misleading the investor.

35. The Guidelines also generally note that information should be prepared and disclosed in accordance with internationally recognised standards high quality standards related to accounting and financial and non-financial disclosure. This significantly improves the ability of investors to monitor the enterprise by providing increased reliability and comparability of reporting, and improved insight into its performance. The annual independent audit recommended by the Guidelines should contribute to an improved control and compliance by the enterprise. In the context of disclosure, due diligence processes, as outlined in paragraph 3, can be a useful means by which enterprises can ensure they are effectively identifying and communicating relevant RBC information in a consistent and credible manner, including information which may be material. In this way due diligence can support enterprises in identifying material risks and impacts, and enhance the relevance, quality and comparability of disclosures under both paragraphs 2 and 3. Furthermore, due diligence processes can be a means of ensuring credible reporting against enterprise goals and commitments for which clearly identifiable or measurable targets may not exist.

36. Many enterprises have adopted measures designed to help them comply with the law and standards of business conduct, and to enhance the transparency of their operations. A growing number of firms have issued voluntary codes of corporate conduct, which are expressions of commitments to international standards or ethical values in such areas as environment, including climate change, human rights, labour standards, consumer protection, or taxation. Specialised management systems have been or are being developed and continue to evolve with the aim of helping them respect these commitments – these involve information systems, operating procedures and training requirements.

37. Enterprises may be required to report against broader disclosure standards mandated by regulatory or listing authorities and, where consistent with a jurisdiction’s legal and disclosure requirements, should seek to adopt and align with emerging global best practice and evolving disclosure standards, for example on climate and emissions. Enterprises are cooperating with NGOs and intergovernmental organisations in developing reporting standards that enhance enterprises’ ability to communicate how their activities influence sustainable development outcomes (for example, the International Sustainability Standards Board, and the Global Reporting Initiative which has incorporated responsible business conduct information into its Universal Standards).

38. Enterprises are encouraged to proactively communicate relevant RBC information, to provide easy and economical access to published information and to consider making use of information technologies to meet this goal. Information that is made available to users in home markets should also be available to all interested users with consideration for accessibility. Enterprises should seek to ensure information is presented appropriately for different target audiences and may take special steps to make information available to communities that do not have access to online or printed media (for example, poorer remote or impoverished communities that are directly affected by the enterprise’s activities).

39. Review of responsible business conduct information by an independent, competent and qualified entity in accordance with internationally recognized assurance standards can substantiate and enhance confidence in the information disclosed and contribute to higher quality and more comparable reporting.
Chapter IV. Human Rights

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter IV. Human Rights

(text to illustrate potential edits is in bold and italics for new text and strike-out for deleted text)

**Full edited text of Chapter IV. Human Rights**

States have the duty to protect human rights. Enterprises should, within the framework of internationally recognised human rights, the international human rights obligations of the countries in which they operate as well as relevant domestic laws and regulations:

1. Respect human rights, which means they should avoid infringing on the human rights of others and should address adverse human rights impacts with which they are involved.

2. Within the context of their own activities, avoid causing or contributing to adverse human rights impacts and address such impacts when they occur.

3. Seek ways to prevent or mitigate adverse human rights impacts that are directly linked to their business operations, products or services by a business relationship, even if they do not contribute to those impacts.

4. Have a publicly available policy commitment to respect human rights.

5. Carry out human rights due diligence as appropriate to their size, the nature and context of operations and the severity of the risks of adverse human rights impacts.

6. Provide for or co-operate through legitimate processes in the remediation of adverse human rights impacts where they identify that they have caused or contributed to these impacts.

**Commentary on Human Rights**

36. This chapter opens with a chapeau that sets out the framework for the specific recommendations concerning enterprises’ respect for human rights. It draws upon the United Nations Framework for Business and Human Rights ‘Protect, Respect and Remedy’ and is in line with its implementing document the Guiding Principles on Business and Human Rights for its implementation as well as the ILO Tripartite Declaration of Principles concerning Multinational Enterprises and Social Policy.

37. The chapeau and the first paragraph recognise that States have the duty to protect human rights, and that enterprises, regardless of their size, sector, operational context, ownership and structure, should respect human rights wherever they operate. Respect for human rights is the global standard of expected conduct for enterprises independently of States’ abilities and/or willingness to fulfil their human rights obligations, and does not diminish those obligations.

38. A State’s failure either to enforce relevant domestic laws, or to implement international human rights obligations or the fact that it may act contrary to such laws or international obligations does not diminish the expectation that enterprises respect human rights. In countries where domestic laws and regulations conflict with internationally recognised human rights, enterprises should seek ways to honour them to the fullest extent which does not place them in violation of domestic law, consistent with paragraph 2 of the Chapter on Concepts and Principles.

39. In all cases and irrespective of the country or specific context of enterprises’ operations, reference should be made at a minimum to the internationally recognised human rights expressed in the International Bill of Human Rights, consisting of the Universal Declaration of Human Rights and the main instruments through which it has been codified: the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights, and to
the principles concerning fundamental rights set out in the 1998 International Labour Organisation Declaration on Fundamental Principles and Rights at Work.

40. Enterprises can have an impact on virtually the entire spectrum of internationally recognised human rights. In practice, some human rights may be at greater risk than others in particular industries or contexts, and therefore will be the focus of heightened attention. However, situations may change, so all rights should be the subject of periodic review. Depending on circumstances, enterprises may need to consider additional standards. For instance, enterprises should respect the human rights of individuals belonging to specific groups or populations that require particular attention, where they may have adverse human rights impacts on them. **As needed, enterprises should take additional steps to assess and address adverse impacts on individuals who may be at heightened risk due to their membership in marginalised or vulnerable groups or populations, including Indigenous Peoples.** In this regard, United Nations instruments have elaborated further on the rights of indigenous peoples; persons belonging to national or ethnic, religious and linguistic minorities; women; children; persons with disabilities; and migrant workers and their families. Moreover, in situations of armed conflict enterprises should respect the standards of international humanitarian law, which can help enterprises avoid the risks of causing or contributing to adverse impacts when operating in such difficult environments.

41. In paragraph 1, addressing actual and potential adverse human rights impacts consists of taking adequate measures for their identification, prevention, where possible, and mitigation of potential human rights impacts, remediation of actual impacts, and accounting for how the adverse human rights impacts are addressed. The term ‘infringing’ refers to adverse impacts that an enterprise may have on the human rights of individuals.

42. Paragraph 2 recommends that enterprises avoid causing or contributing to adverse human rights impacts through their own activities and address such impacts when they occur. ‘Activities’ can include both actions and omissions. Where an enterprise causes or may cause an adverse human rights impact, it should take the necessary steps to cease or prevent the impact. Where an enterprise contributes or may contribute to such an impact, it should take the necessary steps to cease or prevent its contribution and use its leverage to mitigate any remaining impact to the greatest extent possible. Leverage is considered to exist where the enterprise has the ability to effect change in the practices of an entity that cause adverse human rights impacts.

43. Paragraph 3 addresses more complex situations where an enterprise has not contributed to an adverse human rights impact, but that impact is nevertheless directly linked to its operations, products or services by its business relationship with another entity. Paragraph 3 is not intended to shift responsibility from the entity causing an adverse human rights impact to the enterprise with which it has a business relationship. Meeting the expectation in paragraph 3 would entail an enterprise, acting alone or in co-operation with other entities, as appropriate, to use its leverage to influence the entity causing the adverse human rights impact to prevent or mitigate that impact. ‘Business relationships’ include relationships with business partners, entities in its supply chain, and any other non-State or State entity directly linked to its business operations, products or services. Among the factors that will enter into the determination of the appropriate action in such situations are the enterprise’s leverage over the entity concerned, how crucial the relationship is to the enterprise, the severity of the impact, and whether terminating the relationship with the entity itself would have adverse human rights impacts.

44. Paragraph 4 recommends that enterprises express their commitment to respect human rights through a **publicly available** statement of policy that: (i) is approved at the most senior level of
the enterprise; (ii) is informed by relevant internal and/or external expertise; (iii) stipulate the enterprise’s human rights expectations of personnel, business partners and other parties directly linked to its operations, products or services; (iv) is publicly available and communicated internally and externally to all personnel, business partners and other relevant parties; (v) is reflected in operational policies and procedures necessary to embed it throughout the enterprise.

45. Paragraph 5 recommends that enterprises carry out human rights due diligence. The process entails assessing actual and potential human rights impacts, integrating and acting upon the findings, tracking responses as well as communicating how impacts are addressed. Human rights due diligence can be included within broader enterprise risk management systems provided that it goes beyond simply identifying and managing material risks to the enterprise itself to include the risks to rights-holders. It is an on-going exercise, recognising that human rights risks may change over time as the enterprise’s operations and operating context evolve. Complementary guidance on due diligence, including in relation to supply chains, and appropriate responses to risks arising in supply chains are provided under paragraphs A.10 to A.12 of the Chapter on General Policies and their Commentaries. In addition, further guidance has been developed for specific sectors and risk issues as well as at a cross-sectoral level through the OECD Due Diligence Guidance on Responsible Business Conduct. Conducting human rights due diligence may involve considering distinct and intersecting risks including those related to individual characteristics or belonging to vulnerable or marginalized groups. Considering ways to maximise sustainable development outcomes for such groups may also be relevant in this regard.

46. When enterprises identify through their human rights due diligence process or other means that they have caused or contributed to an adverse impact, the Guidelines recommend that enterprises provide for or cooperate in their remediation through legitimate processes. Enterprises should establish or participate in processes in place to enable remediation. Some situations require co-operation with judicial or State-based non-judicial mechanisms. In others, operational-level grievance mechanisms for those potentially impacted by enterprises’ activities can be an effective means of providing for such processes when they meet the core criteria of: legitimacy, accessibility, predictability, equitability, compatibility with the Guidelines and transparency, and are based on dialogue and engagement with a view to seeking agreed solutions. Such mechanisms can be administered by an enterprise alone or in collaboration with other stakeholders and can be a source of continuous learning. Operational-level grievance mechanisms should not be used to undermine the role of trade unions in addressing labour-related disputes, nor should such mechanisms preclude access to judicial or non-judicial grievance mechanisms, including the National Contact Points under the Guidelines.
Chapter V. Employment and Industrial Relations

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter V. Employment and Industrial Relations

Enterprises should within the framework of applicable law, regulations and prevailing labour relations and employment practices and applicable international labour standards, avoiding any unlawful employment and industrial relations practices, and in line with due diligence expectations described in Chapter II and IV:

1. a) Respect the right of workers employed by the multinational enterprise to establish or join trade unions and representative organisations of their own choosing, including by avoiding interfering with workers' choice to establish or join a trade union or representative organisation of their own choosing.

b) Respect the right of workers employed by the multinational enterprise to have trade unions and representative organisations of their own choosing recognised for the purpose of collective bargaining, and engage in constructive negotiations, either individually or through employers' associations, with such representatives with a view to reaching agreements on terms and conditions of employment.

c) Contribute to the effective abolition of child labour, and take immediate and effective measures to secure the prohibition and elimination of the worst forms of child labour as a matter of urgency.

d) Contribute to the elimination of all forms of forced or compulsory labour and take adequate steps immediate and effective measures to seek to secure the elimination of forced or compulsory labour as a matter of urgency, not exist in their operations.

e) Be guided throughout their operations by the principle of equality of opportunity and treatment in employment and not discriminate against their workers with respect to employment or occupation on such grounds as race, colour, sex, age, religion, political opinion, national extraction or social origin, persons with disabilities or other status, unless selectivity concerning worker characteristics furthers established governmental policies which specifically promote greater equality of employment opportunity or relates to the inherent requirements of a job.

f) **Provide a safe and healthy working environment, recognising occupational safety and health as an ILO Fundamental Principle and Right at Work, including by preventing accidents and injury to health arising out of, linked with or occurring in the course of work, by minimising, so far as is reasonably practicable, the causes of hazards inherent in the working environment.**

2.

a) Provide such facilities to workers' representatives as may be necessary to assist in the development of effective collective agreements.

b) Provide information in a timely manner to workers' representatives which is needed for meaningful negotiations on conditions of employment.
c) Provide information to workers and their representatives which enables them to obtain a true
and fair view of the performance of the entity or, where appropriate, the enterprise as a whole.

3. Promote consultation and co-operation between employers and workers and their
representatives through legitimate processes, structures or mechanisms on matters of mutual concern.

4. a) Observe standards of employment, contractual arrangements and industrial relations not less
favourable than those observed by comparable employers in the host country.

b) When multinational enterprises operate in developing countries, where comparable employers
may not exist, provide the best possible wages, benefits and conditions of work, within the
framework of government policies and applicable international standards. These should be
related to the economic position of the enterprise, but should be at least adequate to satisfy the
basic needs of the workers and their families.

c) Take adequate steps to ensure occupational health and safety in their operations. Maintain
highest standards of safety and health at work.

5. In their operations, to the greatest extent practicable, employ local workers and provide training with a
view to improving skill levels, in co-operation with worker representatives and, where appropriate,
relevant governmental authorities.

6. In considering changes in their operations which would have major employment effects, in particular in
the case of the closure of an entity involving collective lay-offs or dismissals, provide reasonable notice
of such changes to representatives of the workers in their employment and their organisations, and,
where appropriate, to the relevant governmental authorities, and co-operate with the worker
representatives and appropriate governmental authorities so as to mitigate to the maximum extent
practicable adverse effects of such changes. In light of the specific circumstances of each case, it would
be appropriate if management were able to give such notice prior to the final decision being taken. Other
means may also be employed to provide meaningful co-operation to mitigate the effects of such
decisions.

7. In the context of bona fide negotiations with workers’ representatives on conditions of employment, or
while workers are exercising a right to organise, not threaten to transfer the whole or part of an operating
unit from the country concerned nor transfer workers from the enterprise’s component entities in other
countries in order to influence unfairly those negotiations or to hinder the exercise of a right to organize
or bargain collectively.

8. Enable authorised representatives of the workers in their employment to negotiate on collective
bargaining or labour-management relations issues and allow the parties to consult on matters of mutual
concern with representatives of management who are authorised to take decisions on these matters.

Commentary on Employment and Industrial Relations

47. This chapter opens with a chapeau that includes a reference to “applicable” law and regulations, which
is meant to acknowledge the fact that multinational enterprises, while operating within the jurisdiction
of particular countries, may be subject to national and international levels of regulation of employment
and industrial relations matters. The terms “prevailing labour relations” and “employment practices” are
sufficiently broad to permit a variety of interpretations in light of different national circumstances – for
example, different bargaining options provided for workers under national laws and regulations.

48. The International Labour Organisation (ILO) is the competent body to set and deal with international
labour standards, and to promote fundamental rights at work as recognised in its 1998 Declaration
on Fundamental Principles and Rights at Work. The Guidelines, as a non-binding instrument, have
a role to play in promoting observance of these standards and principles among multinational
enterprises. The provisions of the Guidelines chapter echo relevant provisions of the 1998
Declaration, as well as the 1977 ILO Tripartite Declaration of Principles concerning Multinational
Enterprises and Social Policy, last revised in 2006 (the ILO MNE Declaration). The ILO MNE
Declaration sets out principles in the fields of employment, training, working conditions, and
industrial relations, while the OECD Guidelines cover all major aspects of corporate behaviour. The
OECD Guidelines and the ILO MNE Declaration refer to the behaviour expected from enterprises and are intended to parallel and not conflict with each other. The ILO MNE Declaration can therefore be of use in understanding the Guidelines to the extent that it is of a greater degree of elaboration. However, the responsibilities for the follow-up procedures under the ILO MNE Declaration and the Guidelines are institutionally separate.

49. The terminology used in Chapter V is consistent with that used in the ILO MNE Declaration. It is recognised that in the absence of an employment relationship, enterprises are nevertheless expected to act in accordance with the risk-based due diligence and supply chain recommendations in paragraphs A.10 to A.13 of Chapter II on General Policies. This is especially relevant in sectors where informality, short-term working arrangements, decent work deficits and digital transformation are common. The use of the terms “workers employed by a multinational enterprise” and “workers in their employment” is intended to have the same meaning as in the ILO MNE Declaration. These terms refer to workers who are “in an employment relationship with the multinational enterprise”. Enterprises wishing to understand the scope of their responsibility under Chapter V will find useful guidance for determining the existence of an employment relationship in the context of the Guidelines in the non-exhaustive list of indicators set forth in ILO Recommendation 198 of 2006, paragraphs 13 (a) and (b). In addition, it is recognised that working arrangements change and develop over time and that enterprises are expected to structure their relationships with workers so as to avoid supporting, encouraging or participating in disguised employment practices. A disguised employment relationship occurs when an employer treats an individual as other than an employee in a manner that hides his or her true legal status.

50. These recommendations do not interfere with true civil and commercial relationships, but rather seek to ensure that individuals in an employment relationship have the protection that is due to them in the context of the Guidelines. It is recognised that in the absence of an employment relationship, enterprises are nevertheless expected to act in accordance with the risk-based due diligence and supply chain recommendations in paragraphs A.10 to A.13 of Chapter II on General Policies.

51. Paragraph 1 of this chapter is designed to echo all five fundamental principles and rights at work which are contained in the ILO’s 1998 Declaration ILO Declaration on Fundamental Principles and Rights at Work, namely the freedom of association and right to collective bargaining, the effective abolition of child labour, the elimination of all forms of forced or compulsory labour, non-discrimination in employment and occupation, and a safe and healthy working environment. These principles and rights have been developed in the form of specific rights and obligations in ILO Conventions recognised as fundamental.

52. Paragraph 1c) recommends that multinational enterprises contribute to the effective abolition of child labour in the sense of the ILO 1998 Declaration on Fundamental Principles and Rights at Work, and ILO Convention 182 concerning the worst forms of child labour. Long-standing ILO instruments on child labour are Convention 138 and Recommendation 146 (both adopted in 1973), concerning minimum ages for employment, and ILO Convention 182 and Recommendation 190 concerning the worst forms of child labour. Through their labour management practices, their creation of high-quality, well-paid, decent jobs and their contribution to economic growth, multinational enterprises can play a positive role in helping to address the root causes of poverty in general and of child labour in particular. It is important to acknowledge and encourage the role of multinational enterprises in contributing to the search for a lasting solution to the problem of child labour. In this regard, raising the standards of education of children living in host countries is especially noteworthy. As a best practice, enterprises can seek input from survivors of forced and child labor, for example as experts and consultants, in their efforts to prevent forced and child labor.

53. Paragraph 1d) recommends that enterprises contribute to the elimination of all forms of forced and compulsory labour, another principle derived from the 1998 ILO Declaration ILO Declaration on Fundamental Principles and Rights at Work, and recognised as the human right to be free from forced and compulsory labor in the International Covenant on Civil and Political Rights (ICCPR). The reference to this core labour right is based on the ILO Conventions 29 of 1930 and its Protocol of 2014 and Convention 105 of 1957. Convention 29 requests that calls on governments to “suppress the use of forced or compulsory labour in all its forms within the shortest possible period”, while Convention 105 requests of them calls on governments to “suppress and not to make use of any form of forced or compulsory labour” for certain enumerated purposes (for example, as a means of political coercion or labour discipline), and “to take effective measures to secure [its] immediate and complete abolition”. At the same time, it is understood that the ILO is the competent body to deal with the difficult issue of prison labour, in particular when it comes to the hiring-out of prisoners to (or their placing at
the disposal of) private individuals, companies or associations. **Enterprises should take the necessary steps to prevent human trafficking, including forced labour, and address coercive means, including debt bondage. Enterprises should respond to indicators set out in the ILO indicators of Forced Labour and bolster transparency around actions taken to address risks of forced labor associated with their operations, products and services.**

54. The reference to the principle of non-discrimination with respect to employment and occupation in paragraph 1e is considered to apply to such terms and conditions as hiring, job assignment, discharge, pay and benefits, promotion, transfer or relocation, termination, training and retirement. The list of non- permissible grounds for discrimination which is taken from ILO Convention 111 of 1958 **ILO Discrimination (Employment and Occupation) Convention 111 of 1958, ILO Convention 100 of 1951** the Maternity Protection Convention 183 of 2000, Employment (Disabled Persons) Convention 159 of 1983, the Older Workers Recommendation 162 of 1980 and the HIV and AIDS at Work Convention 200 of 2010, considers that any distinction, exclusion or preference on these grounds is in violation of the Conventions, Recommendations and Codes. The term "other status" for the purposes of the Guidelines refers to trade union activity and personal characteristics such as age, disability, pregnancy, marital status, sexual orientation, or HIV status. Consistent with the provisions in paragraph 1e, enterprises are expected to promote equal opportunities for **women and men all with special emphasis on equal criteria for selection, remuneration, and promotion, and equal application of those criteria, and prevent discrimination or dismissals on the grounds of marriage, pregnancy or of those workers with family responsibilities parenthood.**

55. In paragraph 2c) of this chapter, information provided by companies to their workers and their representatives is expected to provide a “true and fair view” of performance. It relates to the following: the structure of the enterprise, its economic and financial situation and prospects, its adverse environmental health and safety impacts, employment trends, and expected substantial changes in operations, taking into account legitimate requirements of business confidentiality. Considerations of business confidentiality may mean that information on certain points may not be provided, or may not be provided without safeguards.

56. The reference to consultative forms of worker participation in paragraph 3 of the Chapter is taken from ILO Recommendation 94 of 1952 concerning Consultation and Co-operation between Employers and Workers at the Level of the Undertaking. It also conforms to a provision contained in the ILO MNE Declaration. Such consultative arrangements should not substitute for workers’ right to bargain over terms and conditions of employment. A recommendation on consultative arrangements with respect to working arrangements is also part of paragraph 8.

57. In paragraph 4, employment and industrial relations standards are understood to include compensation and working-time arrangements. The reference to occupational health and safety implies that multinational enterprises are expected to follow prevailing regulatory standards and industry norms to minimise the risk of accidents and injury to health arising out of, linked with, or occurring in, the course of employment. This encourages enterprises to work to raise the level of performance with respect to occupational health and safety in all parts of their operation even where this may not be formally required by existing regulations in countries in which they operate. It also encourages enterprises to respect workers’ ability to remove themselves from a work situation when there is reasonable justification to believe that it presents an imminent and serious risk to health or safety. Reflecting their importance and complementarities among related recommendations, health and safety concerns are echoed elsewhere in the Guidelines, most notably in chapters on Consumer Interests and the Environment. The ILO Recommendation No. 191 of 2002 **ILO List of Occupational Diseases Recommendation (No. 194)** provides an indicative list of occupational diseases as well as codes of practice and guides which can be taken into account by enterprises for implementing this recommendation. The **Occupational Health and Safety is available in Part IV (Action at the level of the undertakings) of ILO Convention 155 (Occupational Safety and Health) and the Guidelines on occupational safety and health management systems. ILO-OSH 2001.**

58. The recommendation in paragraph 5 of the chapter encourages MNEs to recruit an adequate workforce share locally, including managerial personnel, and to provide training to them. **Training for up-skilling and re-skilling should anticipate future changes in operations and employer needs, including those responding to societal, environmental technological changes, risks and opportunities linked to automation, digitalization, just transition and sustainable development.** Language in this paragraph on training and skill levels complements the text in paragraph A.4 of the General Policies chapter on encouraging human capital formation. The reference to local workers complements the text encouraging local capacity building in paragraph A.3 of the General Policies chapter. In accordance with the ILO Human Resources Development Recommendation 195 of 2004, enterprises are also
encouraged to invest, to the greatest extent practicable, in training and lifelong learning while ensuring equal opportunities to training for women and other vulnerable groups, such as youth, low-skilled people, people with disabilities, migrants, older workers, and Indigenous Peoples.

59. **Enterprises have an important role to play in promotion and creating decent work.** Paragraph 6 recommends that enterprises provide reasonable notice to the representatives of workers and relevant government authorities, of changes in their operations which would have major effects upon the livelihood of their workers, in particular the closure of an entity or moves towards automation involving collective or large scale layoffs or dismissals. As stated therein, the purpose of this provision is to afford an opportunity for co-operation to mitigate the effects of such changes. This is an important principle that is widely reflected in the industrial relations laws and practices of adhering countries, although the approaches taken to ensuring an opportunity for meaningful co-operation are not identical in all adhering countries. The paragraph also notes that it would be appropriate if, in light of specific circumstances, management were able to give such notice prior to the final decision. Indeed, notice prior to the final decision is a feature of industrial relations laws and practices in a number of adhering countries. However, it is not the only means to ensure an opportunity for meaningful co-operation to mitigate the effects of such decisions, and the laws and practices of other adhering countries provide for other means such as defined periods during which consultations must be undertaken before decisions may be implemented.
Enterprises can play a key role in advancing sustainable economies, and they should contribute to delivering an effective and progressive response to global, regional and local environmental challenges. Enterprises should, within the framework of laws, regulations and administrative practices in the countries in which they operate, and in consideration of relevant international agreements, principles, objectives, and standards, enterprises should carry out risk-based due diligence as described in Chapter II, to identify, prevent and mitigate the adverse environmental, health and safety impacts of their operations, products and services, while taking due account of the need to protect the environment, public health and safety, and generally to conduct their activities in a manner contributing to the wider goal of sustainable development.

Such impacts can include, among others:

- a) climate change;
- b) biodiversity loss;
- c) air, water and soil pollution;
- d) degradation of land, marine and freshwater ecosystems;
- e) deforestation;
- f) overconsumption of material, water, energy and other natural resources;
- g) harmful generation and mismanagement of waste, including hazardous substances;
- h) harm to animal welfare.

In particular, enterprises should:

1. Establish and maintain a system of environmental management appropriate to the enterprise, including by carrying out risk-based due diligence for adverse environmental, health and safety impacts.

2. (Originally part of paragraph 1) As part of their management of adverse environmental, health and safety impacts, enterprises should:
   a) collection and evaluate information of adequate and timely information regarding the environmental, health, and safety impacts of their operations, products and services activities.
   b) establishment of measurable objectives, and, where appropriate, targets and strategies for addressing known and reasonably foreseeable adverse impacts and strategies for improving environmental performance, and resource utilisation, including periodically reviewing the continuing relevance of these objectives; where appropriate, targets should be science-based, informed by best practice and consistent with relevant national policies and international environmental commitments and goals; and periodically review the continuing relevance of these objectives, targets and plans.
   c) regularly verify the effectiveness and monitoring and verification of progress toward environmental, health, and safety objectives and targets;
   d) contribute to environmental remediation as necessary to address adverse environmental impacts the enterprise has caused or contributed to or use leverage to influence the entity causing the adverse impact to remediate it.

3. Assess and seek to address potential or actual adverse impacts to workers, communities, or consumers resulting from their environmental management activities, including in support of a just transition.
4. **(Originally paragraph 2)** Taking into account concerns about cost and administrative burden, business confidentiality, and the protection of intellectual property rights:
   a) provide the public and workers with adequate, measurable and verifiable (where applicable) and timely information on the **actual and potential environmental, health and safety impacts** of the activities of the enterprise based on best available information, which could include reporting on progress in improving environmental performance; and
   b) engage in adequate and timely communication and meaningful engagement consultation with the communities as well as other stakeholders directly affected and potentially affected by the environmental, health and safety impacts and policies of the enterprise and by their implementation.

5. **(Originally paragraph 3)** Assess, and address in decision-making, the known or reasonably foreseeable environmental, health, and safety impacts associated with the processes, goods, operations, products, and services of the enterprise over their full life cycle with a view to:
   a) avoiding or, when unavoidable, mitigating and where applicable, remediating them;
   b) enhancing positive effects, and;
   c) advancing sustainable production and consumption patterns notably including by pursuing resource efficiency and contributing to a more circular economy among other approaches.

Where these proposed activities may have significant adverse environmental, health, or safety impacts, and where they are subject to a decision of a competent authority, prepare an appropriate environmental impact assessment.

6. **(Originally paragraph 4)** Consistent with the scientific and technical understanding of the risks, where there are threats of serious or irreversible damage to the environment, taking also into account human health and safety, not use the lack of full scientific certainty or pathways as a reason for postponing cost-effective measures to prevent or minimise such damage.

7. **(Originally paragraph 5)** Maintain contingency plans for preventing, mitigating, and controlling serious environmental and health damage from their operations, including accidents and emergencies; and mechanisms for immediate reporting to the competent authorities.

8. **(Originally paragraph 6)** As part of environmental management, continue to seek to improve corporate environmental performance, at the level of the enterprise and, where appropriate, of its supply chain entities with which it has a business relationship including by encouraging such activities as:
   a) adopting improved technologies and operating procedures in all parts of an enterprise that reflect standards of concerning in terms of environmental performance and where feasible best available technology in the best performing part of the enterprise;
   b) developing and providing products or services that have no undue environmental impacts; are safe in their intended use; reduce pollution, greenhouse gas emissions and generation of waste, in particular hazardous waste; are produced in a way that uses natural resources sustainably and minimises as far as possible the necessary energy and material input; are efficient in their consumption of nature resources—can be reused, recycled, or disposed of safely and in an environmentally sound manner;
   c) promoting higher levels of awareness among customers of the environmental implications of using the products and services of the enterprise, including, by providing relevant and accurate information on their environmental, health and safety impacts products (for example, on greenhouse gas emissions, biodiversity, resource efficiency, reparability and recyclability of products) or other environmental issues; and
   d) exploring and assessing ways of improving the environmental performance of the enterprise over the longer term, for instance by developing strategies for emission reduction, efficient resource utilisation and recycling, substitution or reduction of use of toxic substances, or strategies on biodiversity in relation to the adverse environmental impacts enumerated in paragraph 1;
   e) providing support, including capacity building on environmental management, to suppliers and other business relationships, particularly SMEs, where appropriate and feasible.
9. (Originally paragraph 7) Provide adequate education and training to workers in environmental, health and safety matters, including the handling on the management of hazardous and non-hazardous materials and waste well as the prevention of environmental accidents, as well as more general environmental management areas, such as environmental impact assessment procedures, public relations, and environmental technologies.

10. (originally paragraph 8) Contribute to the development of environmentally responsible and economically efficient public policy, for example, by means of partnerships or initiatives that will enhance environmental awareness and protection.

Commentary on Environment:

60. Governments, business and consumers are jointly responsible for achieving environmental objectives. The Guidelines set out expectations on how enterprises should manage actual and potential adverse environmental, health and safety impacts. This is based on the Guidelines' overall intention to contribute to responses to environmental challenges and international environmental commitments and goals, including in relation to climate change mitigation and adaptation; the conservation restoration, and sustainable use of biodiversity including ecosystems; the sustainable and efficient and lawful use of land, resources and energy; sustainable consumption and production including through promotion of circular economy approaches, and pollution prevention, reduction and control. International commitments, multilateral agreements and other regulatory frameworks represent an important benchmark for understanding environmental issues and expectations. The chapeau paragraph of this chapter clarifies the link with Chapter II and specifies a non-exhaustive list of adverse environmental, health and safety impacts that may be associated with business activities. Carrying out risk-based due diligence within the scope of the recommendations in this chapter can help businesses identify and prioritise their most significant adverse environmental impacts and also understand their relationship with other adverse impacts and objectives covered by these Guidelines. The text of the Environment Chapter broadly reflects the principles and objectives contained in the Rio Declaration on Environment and Development, in Agenda 21 (within the Rio Declaration) and the United Nations 2030 Agenda for Sustainable Development. It is also taken into account consistent with the UN Framework Convention on Climate Change (UNFCCC), the Paris Agreement, the Convention on Biological Diversity, Kunming-Montreal Global Biodiversity Framework, the Aarhus Convention on Access to Information, Public Participation in Decision-making, and Access to Justice in Environmental Matters, the UN Convention to Combat Desertification, relevant regional environmental agreements, and reflects standards contained in such instruments as the ISO Standard on Environmental Management Systems and OECD Strategic Approach to International Chemicals Management (SAICM).

61. In the context of these Guidelines, “environmental management” should be interpreted in its broadest sense, embodying activities aimed at understanding environmental impacts and risks, controlling known and reasonably foreseeable environmental impacts related to an enterprise’s operations, products and services as well as taking into consideration the enterprise’s share of cumulative impacts and continually seeking to improve an enterprise’s environmental performance. Sound Environmental management is an important part of sustainable development. Moreover, in the context of these Guidelines, “environmental management” should be interpreted in line with Paragraph 1 and include carrying out risk-based due diligence in line with the recommendations articulated in Chapter II. Environmental management is increasingly being seen as both a business responsibility and a business opportunity. Multinational enterprises have a role to play in both respects. Managers of these enterprises should therefore give appropriate attention to environmental issues within their business strategies. Improving environmental performance requires a commitment to a systematic approach and to continual improvement of the system. An environmental management system provides the internal framework necessary to integrate environmental considerations into business operations. Having such a system in place should help to assure shareholders, workers, employees and the community and other relevant stakeholders that the enterprise is actively working to protect the environment, communities and society from the impact of its activities. Environmental management can be linked with the responsible governance of tenure of land, forests, and fisheries. As noted in the Voluntary Guidelines on the Responsible Governance of Tenure, of Land, Fisheries and Forests in the Context of National Food Security (VGGTs), (2012) the responsible governance of tenure of lands, forests and fisheries can play a role in supporting...
sustainable use of the environment. In this context, the VGGTs call for investments that do no harm, and safeguard against dispossession of legitimate tenure right holders and environmental damage.

62. **(new paragraph)** The Guidelines recognise that many activities can entail impacts on the environment. For the purposes of the Guidelines adverse environmental impacts are known or reasonably foreseeable changes in the physical environment or biota, resulting from an enterprise’s activities, which have significant deleterious effects on the composition, resilience, or productivity of natural and managed ecosystems, or on the operation of socio-economic systems or on human health and welfare. Adverse environmental impacts should be assessed in light of best available science and benchmarks or standards established in: national and sub-national environmental regulatory frameworks; relevant multilateral agreements; international environmental commitments or goals, such as those listed in paragraph 60 of this commentary; and, where applicable, standards of environmental management such as ISO environmental management standards, and further informed by best practice. Adverse environmental impacts may be localised or transboundary in nature. They can also be cumulative and interlinked. Most international environmental agreements generally reflect commitments by States at a whole-of-economy level rather than specific standards for individual or business and sectors. As such, it may be complex to identify and define to what extent an enterprise may be causing, contributing to or directly linked to some adverse environmental impacts. In such situations, whether an enterprise is causing, contributing to or directly linked to an adverse environmental impact may be assessed on the basis of the quality of its environmental management practices, including its due diligence in addition to its compliance with regulatory standards.

63. **(new paragraph)** Adverse environmental impacts, and associated environmental management, can be closely interlinked with other matters covered by the Guidelines. Notably the Paris Agreement preamble takes into account the imperatives of a just transition and of the workforce and the creation of decent work and quality jobs in accordance with nationally defined development priorities and acknowledges that when taking action to address climate change Parties should respect, promote and consider their respective obligations on human rights. Enterprises can contribute to a just transition by understanding and responding to impacts on people associated with their environmental management activities and objectives.

64. **(originally paragraph 62)** In addition to improving environmental performance, instituting an environmental management system can provide economic benefits to companies through reduced operating and insurance costs, improved energy and resource conservation, reduced compliance and liability charges, increased sustainability and resilience, improved access to capital and skills, improved customer satisfaction, and improved community and public relations.

65. **(originally paragraph 65)** In the context of these Guidelines, “sound environmental management” should be interpreted in its broadest sense, embodying activities aimed at controlling both direct and indirect environmental impacts of enterprise activities over the long term, and involving both pollution control and resource management elements.

66. In most enterprises, an internal control system is needed to manage the enterprise’s activities. The environmental part of this system may include such elements as targets for improved performance and regular monitoring of progress towards these targets.

67. **(originally paragraph 65)** Information Public disclosure regarding the activities of enterprises and about their relationships with sub-contractors and their suppliers associated environmental, health and safety impacts is an important vehicle for building confidence with the public. This vehicle is most effective when information is provided in a transparent manner, a component of due diligence and when it encourages active consultation may also be
required by local law. Furthermore, meaningful engagement with stakeholders such as employees, customers, investors, suppliers, contractors, local communities, vulnerable or marginalised groups, persons possessing special rights or legitimate tenure rights, and Indigenous Peoples, and with the public-at-large is important where they are or may be affected by such impacts, so as to promote a climate of long-term trust and understanding on environmental issues of mutual interest. Reporting and communication are particularly appropriate where scarce or at-risk environmental assets are at stake either in a regional, national or international context, reporting standards such as the Global Reporting Initiative and other environmental reporting standards provide useful references. [See also Chapter III on Disclosure]

68. In providing accurate information on their products, enterprises have several options such as voluntary labelling or certification schemes. In using these instruments enterprises should take due account of their social and economic effects on developing countries and of existing internationally recognised standards.

69. (originally paragraph 67) Normal business activity can involve the ex ante assessment of the potential environmental impacts associated with the enterprise’s activities. Enterprises often carry out appropriate environmental impact assessments, even if they are not required by law. Environmental assessments made by the enterprise may contain a broad and forward-looking view of the potential adverse environmental, health and safety impacts and of activities of sub-contractors and suppliers and addressing relevant impacts and examining alternatives and mitigation measures to avoid or redress adverse impacts. The Guidelines also recognise that multinational enterprises have certain responsibilities in other parts of the product life cycle.

70. (New paragraph) Enterprises are encouraged to promote sustainable consumption and production patterns, including, through resource efficiency, the circular economy and other sustainable economic models. Through such practices enterprises can significantly reduce their adverse environmental impacts. Resource efficiency promotes more efficient and more effective use of resources and materials, including through environmentally sound raw material supply, the preferential use of renewable and high quality secondary raw material. Further, circular economy approaches could be promoted, as appropriate, as one of the means available to achieve sustainable development, according to national priorities and circumstances. As per resolution 2019 UNEP/EA.4/L.2 of the United Nations Environment Assembly, a more circular economy can contribute significantly to sustainable consumption and production. The resolution defines circular economy as a model in which products and materials are designed so that they can be reused, remanufactured, recycled or recovered and therefore maintained in the economy for as long as possible, along with the resources they are made of, and the generation of waste, especially hazardous waste, is avoided or minimised, and greenhouse gas emissions are prevented and reduced.

71. (originally paragraph 68) Several instruments already adopted by countries adhering to the Guidelines, including Principle 15 of the Rio Declaration on Environment and Development, enunciate a “precautionary approach.” None of these instruments is explicitly addressed to enterprises, although enterprise contributions are implicit in all of them.

72. (originally paragraph 69) The basic premise of the Guidelines is that enterprises should act as soon as possible, and in a proactive way, to avoid for instance, serious or irreversible adverse environmental, damages resulting from their activities. health and safety impacts. However, the fact that the Guidelines are addressed to enterprises means that no existing instrument is completely adequate for expressing this recommendation. The Guidelines therefore draw upon, but do not completely mirror, any existing instrument.
73. (originally paragraph 70) The Guidelines are not intended to reinterpret any existing instruments or to create new commitments or precedents on the part of governments – they are intended only to recommend how the precautionary approach should be implemented at the level of enterprises. Given the early stage of this process, it is recognised that some flexibility is needed in the application of this approach, based on the specific context in which it is carried out. It is also recognised that governments determine the basic framework in this field in light of their capabilities, and have the responsibility to consult periodically with stakeholders on the most appropriate ways forward, ensuring transparency and a science-based approach.

74. (new paragraph) Although addressed to governments, the Paris Agreement and UNFCCC are important references for enterprises in their efforts to contribute to climate mitigation and adaptation. Enterprises play an important role in achieving the internationally agreed goal of limiting global temperature rises to well below 2°C above pre-industrial levels and pursuing efforts to limit the temperature increase to no more than 1.5°C above pre-industrial levels. For the purposes of these Guidelines, in the context of climate change, adverse impacts are understood as 1) emission of greenhouse gases or damage to carbon sinks in a manner that is not consistent with internationally agreed global temperature goals based on best available science including as assessed by the Intergovernmental Panel on Climate Change (IPCC) or 2) undermining climate resilience. The concept of causing or contributing to adverse impacts associated with climate change under the Guidelines is distinct from the extent to which direct or indirect emissions of an individual enterprise have a causal link to global temperature increases.

75. (new paragraph) Environmental management systems should include practical actions to respond to the climate emergency. This includes the introduction and implementation of science-based policies and strategies on climate change mitigation and adaptation such as transition or decarbonisation plans. In this respect enterprises should adopt, implement, monitor and report on short, medium and long-term mitigation targets. These should be, based on best available science including as assessed by IPCC, and take into account scope 1, 2, and, to the extent possible based on best available information, scope 3 GHG emissions. It will be important to report against, review and update targets regularly in relation to their adequacy and relevance, based on the latest available scientific evidence and as different national or industry specific transition pathways are developed and updated. Enterprises should follow a mitigation hierarchy that prioritizes eliminating or reducing sources of emissions over offsetting, compensation, or neutralization measures. Carbon credits, or offsets may be considered as a means to address unabated emissions as a last resort. They should not draw attention away from the need to reduce emissions or lock-in greenhouse gas intensive processes and infrastructures. Enterprises should report publicly any use of any carbon credits or offsets, including the purpose of use. Such reporting should be distinct from and complementary to reporting on emissions reduction.

76. (new paragraph) The use of leverage and provision of technology on mutually acceptable terms, technical assistance and funding to suppliers and other business relationships for climate mitigation and adaptation efforts will be crucial for meeting targets and addressing impacts. The incorporation of responsibility for climate objectives across all relevant corporate functions including the highest governance level of an enterprise will also be important.

77. (new paragraph) Enterprises should avoid activities which undermine climate resilience and can in turn adversely impact health and livelihoods of communities, workers and ecosystems.
78. The conservation of biodiversity and sustainable management and use of natural resources and ecosystems, including, for example, forests, oceans, peatlands and wetlands, is highly important to human health and livelihoods, species survival as well as managing climate change. Enterprises should contribute to the conservation of biological diversity, habitats and ecosystems, the sustainable use of their components, and the fair and equitable sharing of the benefits arising out of the utilisation of genetic resources. Enterprises should also avoid and address marine, freshwater, land and forest degradation, including deforestation, in line with objectives of UN SDGs, notably 15.2, the UN Strategic Plan for Forests 2017–2030 and the 2021 Glasgow Leaders’ Declaration on Forests and Land Use which seek to halt and reverse forest loss and land degradation by 2030. Efforts should include the avoidance of adverse impacts on biodiversity and ecosystems in national parks, reserves and other protected areas, including UNESCO World Heritage sites, areas protected in fulfilment of the Convention on Biological Diversity, and as defined in domestic law, as well as on protected species. Where appropriate, and according to their own capacities and domestic laws where they operate, enterprises should also contribute to sustainable land and forest management, including restoration, afforestation, reforestation and the reduction of marine, freshwater and land degradation. Enterprises’ efforts to prevent or mitigate adverse impacts on biodiversity should be guided by the biodiversity mitigation hierarchy, which recommends first seeking to avoid damage to biodiversity, reducing or minimising it where avoidance is not possible, and using offsets as a last resort for adverse impacts that cannot be avoided, mitigated or reduced.

79. The Guidelines also encourage enterprises to work to raise the level of environmental performance in all parts of their operations, even where this may not be formally required by existing practice in the countries in which they operate. In this regard, enterprises should take due account of their social and economic effects on developing countries.

80. For example, multinational enterprises often have access to existing and innovative technologies or operating procedures which could, if applied, help raise environmental performance overall. Multinational enterprises are frequently regarded as leaders in their respective fields, so the potential for a “demonstration effect” on other enterprises should not be overlooked. Ensuring that the environment of the countries in which multinational enterprises operate also benefit from available and innovative technologies and practices is an important way of building support for international investment activities more generally.

81. Enterprises have an important role to play in the training and education of their employees and other stakeholders with regard to environmental management matters. They are encouraged to discharge this responsibility in as broad a manner as possible, especially in areas directly related to human health and safety. Enterprises should also communicate their policies, requirements and standards in a clear and accessible way to their suppliers and other business relationships.

82. Enterprises should respect domestic laws and regulations pertaining to animal welfare and animal welfare standards that are generally consistent with the World Organisation for Animal Health (WOAH) Terrestrial Code where their activities involve the handling of animals. Good animal welfare requires disease prevention and appropriate veterinary treatment, shelter, management and nutrition, humane handling including transport and humane slaughter or killing.
Chapter VII. Combating Bribery and Other Forms of Corruption

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter VII. Combating Bribery, Bribe Solicitation and Extortion

Full edited text of Chapter VII. Combating Bribery, Bribe Solicitation and Extortion

Enterprises should not engage in any act of bribery or other forms of corruption. Enterprises should not, for example, directly or indirectly, offer, promise, give, or demand a bribe or other undue advantage to obtain or retain business or other improper advantage. Enterprises should also resist the solicitation of bribes and extortion. Enterprises should carry out risk-based due diligence as described in Chapter II and in accordance with applicable laws to identify, prevent, and mitigate actual and potential adverse impacts related to corruption and account for how these impacts are addressed. In particular, enterprises should:

1. Not engage in any act of corruption, including the offering, promising or giving of any undue pecuniary or other advantage to public officials or the employees of persons or entities with which an enterprise has a business relationship or to their relatives or associates. Likewise, enterprises should not request, agree to or accept any undue pecuniary or other advantage from public officials or the employees of persons or entities with which an enterprise has a business relationship or to their relatives or business associates.

2. Develop and adopt adequate internal controls, ethics and compliance programmes or measures for preventing and detecting bribery and other forms of corruption, developed on the basis of a risk-based assessment addressing the individual circumstances of an enterprise, in particular the bribery risks facing the enterprise risk factors related to bribery and other forms of corruption (including, inter alia, its geographical and industrial sector of operation, other responsible business conduct issues, the regulatory environment, the type of business relationships, transactions with foreign governments, and use of third parties). These internal controls, ethics and compliance programmes or measures should include a system of financial and accounting procedures, including a system of internal controls, reasonably designed to ensure the maintenance of fair and accurate books, conflict of interest registers, records, and accounts, to ensure that they cannot be used for the purpose of engaging in bribing or hiding bribery—or other acts of corruption. Such individual circumstances and bribery risks should be regularly monitored and re-assessed as necessary to determine the allocation of compliance resources and to ensure the enterprise's internal controls, ethics and compliance programme or measures are adapted and continue to be effective, and to mitigate the risk of enterprises becoming involved, complicit in bribery, bribe solicitation and extortion or all other forms of corruption. These internal controls, ethics and compliance programmes or measures for preventing and detecting all forms of corruption should also include carrying out risk-based due diligence as described in Chapter II.

3. Prohibit or discourage, in internal company controls, ethics and compliance programmes or measures, the use of small facilitation payments, which are generally illegal in the countries where they are made, and, when such payments are made, accurately record these in books and financial records.
4. Ensure, taking into account the particular bribery risks facing the enterprise related to bribery and other forms of corruption, properly documented due diligence pertaining to the hiring, as well as the appropriate and regular oversight of agents, and that remuneration of agents is appropriate and for legitimate services only. Where relevant, an updated list of agents engaged in connection with transactions with public bodies and State-owned enterprises should be kept and made available to competent authorities, in accordance with applicable public disclosure requirements.

5. Enhance the transparency of their activities in the fight against bribery and other forms of corruption and foster a culture of integrity—bribe solicitation and extortion. Measures could include (i) strong, explicit and visible support and commitment from the board of directors or equivalent governing body and senior management to the enterprise’s internal controls, ethics and compliance programmes, making public commitments against (ii) a clearly articulated and visible corporate policy prohibiting bribery and other forms of corruption, easily accessible to all employees and relevant third parties, including, inter alia, foreign subsidiaries, agents, and other intermediaries bribe, bribe solicitation and extortion, and (iii) disclosing the management systems and the internal controls, ethics and compliance programmes or measures adopted by enterprises in order to honour these commitments. Enterprises should also foster openness and dialogue with the public so as to promote its awareness of and cooperation with in the fight against bribery, bribe solicitation and extortion—other forms of corruption. Enterprises are encouraged to disclose, without prejudice to national laws and requirements, any misconduct related to bribery and other forms of corruption, as well as the measures adopted to address cases of suspected bribery and other forms of corruption. These measures may include, but are not limited to, processes for identifying, investigating, and reporting the misconduct and genuinely and proactively engaging with law enforcement authorities.

6. Promote employee awareness of and compliance with company enterprise policies and internal controls, ethics and compliance programmes or measures against bribery and other forms of corruption, bribe solicitation and extortion among employees and persons or entities linked by business relationships, including suppliers and sub-contractors, through appropriate dissemination of such policies, programmes or measures and through training programmes and disciplinary procedures.

7. Not make illegal contributions to candidates for public office or to political parties or to other political organisations linked to political parties or political candidates. Political contributions should fully comply with national laws including public disclosure requirements and should be reported to senior management. This includes not obliging nor providing any incentives to workers to support a political candidate or a political organisation.

Commentary on Combating Bribery and Other Forms of Corruption

74. Where corruption occurs, adverse social, ecological, and economic impacts often ensue, and vice versa, such adverse impacts are often concealed through means of corruption. As such, an enterprise’s implementation of effective anticorruption measures is an important contribution to the avoidance of adverse impacts covered by the Guidelines.

75. Corruption includes, but is not limited to, the bribery of public officials or the employees of persons or entities linked by business relationships. It may also encompass trading in influence, embezzlement and misuse of sponsorships and charitable donations. Bribery and Corruption is damaging to democratic institutions and the governance of corporations. beyond the economic impact, corruption can have harmful effects, including, inter alia, enabling human rights abuses, lack of enforcement of environmental standards and labour rights, or provision of sub-standard goods. In particular, the diversion of funds through corrupt practices undermines attempts by citizens to achieve higher levels of economic, social and environmental welfare and it impedes efforts to reduce poverty. Corruption disproportionately affects those belonging to marginalised or vulnerable groups or populations and can exacerbate gender inequalities. Enterprises have an important role to play in combating these practices by taking into account overlapping forms of structural discrimination related to ethnicity, race, sex, and sexual
orientation, among other factors, when setting up controls, ethics and compliance programmes.

76. Propriety, integrity and transparency in both the public and private domains are key concepts in the fight against bribery and other forms of corruption, bribe solicitation and extortion. The business community, non-governmental organisations, governments and inter-governmental organisations have should all co-operated to strengthen public support for anti-corruption measures and to enhance transparency and public awareness of the problem of corruption and bribery, including by promoting a culture of whistleblowing when misconduct occurs. The adoption of appropriate corporate governance practices is also an essential element in fostering a culture of ethics within enterprises.

77. The Convention on Combating Bribery of Foreign Public Officials in International Business Transactions (the OECD Anti-Bribery Convention) entered into force on 15 February 1999. The OECD Anti-Bribery Convention, along with the 2006 Recommendation for Further Combating Bribery of Foreign Public Officials in International Business Transactions, the 2009 Recommendation on Tax Measures for Further Combating Bribery of Foreign Public Officials in International Business Transactions, and the OECD Recommendation on Bribery and Officially Supported Export Credits and the Recommendation on Guidelines on Anti-Corruption and Integrity in State-Owned Enterprises, are the core OECD instruments which target governance and integrity in State-Owned Enterprises. They aim to eliminate the “supply” of bribes to foreign public officials, with each country taking responsibility for the activities of its enterprises and what happens within its own jurisdiction. A programme of rigorous and systematic monitoring of countries’ implementation of the OECD Anti-Bribery Convention has been established to promote the full implementation of these instruments.

Footnote: For the purposes of the OECD Anti-Bribery Convention, the offence of foreign bribery a “bribe” is defined as the “...offer[ing], promis[ing], or giv[ing] of any undue pecuniary or other advantage, whether directly or through intermediaries, to a foreign public official, for that official or for a third party, in order that the official act or refrain from acting in relation to the performance of official duties, in order to obtain or retain business or other improper advantage in the conduct of international business”. The Commentaries to the OECD Anti-Bribery Convention (paragraph 9) clarify that “small facilitation” payments do not constitute payments made “to obtain or retain business or other improper advantage” within the meaning of paragraph 1 and, accordingly, are also not an offence. Such payments, which, in some countries, are made to induce public officials to perform their functions, such as issuing licenses or permits, are generally illegal in the foreign country concerned. Other countries can and should address this corrosive phenomenon by such means as support for programmes of good governance. The Anti-Bribery Recommendation (Section XIV.i) recommends that governments “undertake to periodically review their policies and approach on small facilitation payments in order to effectively combat the phenomenon”.

78. The 2006 Anti-Bribery Recommendation recommends in particular that governments encourage their enterprises to develop and adopt adequate internal controls, ethics and compliance programmes or measures for the purpose of preventing and detecting foreign bribery, taking into account the Good Practice Guidance on Internal Controls, Ethics and Compliance, included as Annex II to the 2009 Anti-Bribery Recommendation. This Good Practice Guidance is addressed to enterprises, including state-owned enterprises, as well as business organisations and professional associations, and highlights good practices for ensuring the effectiveness of their internal controls, ethics and compliance programmes or measures to prevent and detect foreign bribery, including protections for reporting persons. It is flexible, and is intended to be adapted by enterprises, in particular small and medium sized enterprises, according to their individual circumstances, including their size, type, legal structure, and geographical and industrial sector of operation, as well as the jurisdictional and other basic legal principles under which they operate. In addition, for the purposes of these Guidelines internal controls, ethics and compliance programmes or measures related to corruption should also include carrying out risk-based due diligence in line with the recommendations articulated in Chapter II.

79. Collective action and meaningful engagement with local and international private sector and civil society organisations, business, professional associations, and international organisations initiatives also may help enterprises to better design and implement effective enterprise anti-bribery corruption policies.
80. The United Nations Convention against Corruption (UNCAC), which entered into force on 14 December 2005, sets out a broad range of standards, measures and rules to fight corruption. Under the UNCAC, States Parties are required to prohibit their officials from receiving bribes and their enterprises from bribing domestic public officials, as well as foreign public officials and officials of public international organisations, and to consider disallowing private to private bribery. The UNCAC and the OECD Anti-Bribery Convention are mutually supporting and complementary.

81. To address the demand side of bribery, good governance practices are important to prevent enterprises from being asked solicited to pay bribes. Enterprises can support collective action initiatives on resisting bribe solicitation and extortion. Both home and host governments should assist enterprises confronted with solicitation of bribes or other forms of corruption and extortion, raise awareness and provide training among relevant public officials, and, where appropriate, undertake coordinated actions to address the solicitation and acceptance of bribes. The Good Practice Guidance on Specific Articles of the Convention in Annex I of the 2009 Anti-Bribery Recommendation states that the OECD Anti-Bribery Convention should be implemented in such a way that it does not provide a defence or exception where the foreign public official solicits a bribe. Furthermore, the UNCAC requires the criminalisation of bribe solicitation by domestic public officials.
## Chapter VIII. Consumer Interests

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter VIII. Consumer Interests

Full edited text of Chapter VIII. Consumer Interests

<table>
<thead>
<tr>
<th>When dealing with consumers, enterprises should act in accordance with fair business, marketing and advertising practices and should take all reasonable steps to ensure the quality and reliability of the goods and services that they provide. In particular, they should:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Ensure that the goods and services they provide meet all agreed or legally required standards for consumer health and safety, including those pertaining to health warnings and safety information, <em>and do not pose an unreasonable risk to the health or safety of consumers in foreseeable use or foreseeable improper use or misuse.</em></td>
</tr>
<tr>
<td>2. Provide accurate, verifiable and clear information that is sufficient to enable consumers to make informed decisions, including information on the prices and, where appropriate, content, safe use, environmental attributes, maintenance, storage, and disposal of goods and services and relevant ecommerce disclosures such as privacy issues; and information about available dispute resolution and redress options. The information should be presented in a comprehensible and easily accessible manner using plain language, while also regarding the needs of accessibility for consumers with disabilities. Where feasible this information should be provided in a manner that facilitates consumers’ ability to compare products.</td>
</tr>
<tr>
<td>3. Provide consumers with access to fair, easy to use, timely and effective non-judicial dispute resolution and redress mechanisms, without unnecessary cost or burden.</td>
</tr>
<tr>
<td>4. Not make representations or omissions, nor engage in any other practices that are deceptive, misleading, fraudulent or unfair or <em>that otherwise subvert consumer choice in ways that harm consumers or competition.</em></td>
</tr>
<tr>
<td>5. Support efforts to promote consumer education in areas that relate to their business activities, with the aim of, <em>inter alia</em>, improving the ability of consumers to: i) make informed decisions involving complex goods, services and markets, ii) better understand the economic, environmental and social impact of their decisions and iii) support sustainable consumption.</td>
</tr>
<tr>
<td>6. Respect <em>Protect</em> consumer privacy by ensuring that enterprise practices relating to the collection and use of consumer data are lawful, transparent and fair, enable consumer participation and choice, and take all reasonable necessary measures to ensure the security of personal data that they collect, store, process or disseminate.</td>
</tr>
<tr>
<td>7. Co-operate fully with public authorities to prevent and combat abusive or deceptive marketing practices (including misleading advertising, and commercial fraud) and to diminish or prevent serious threats to public health and safety or to the environment deriving from the consumption, use or disposal of their goods and services.</td>
</tr>
<tr>
<td>8. Take into consideration, in applying the above principles, i) the needs of vulnerable and disadvantaged consumers especially those who may be experiencing vulnerability or disadvantage and ii) the specific challenges that e-commerce may pose for consumers.</td>
</tr>
</tbody>
</table>

82. The chapter recognises that consumer satisfaction and related interests constitute a fundamental basis for the successful operation of enterprises. It also recognises that consumer markets for goods and services have undergone major transformation over time. Regulatory reform, more open global markets, the development of new technologies which have transformed digital and financial services and the growth in consumer services have been key agents of change, providing consumers with greater choice and the other benefits which derive from more open competition. At the same time, the pace of change and increased complexity of many markets have generally made it more difficult for consumers to compare and assess goods and services. Moreover, consumer demographics have also changed over time. Children are becoming increasingly significant forces in the market, as are the growing number of older adults. While consumers are better educated overall, many still lack the arithmetic and literacy skills that are required in today’s more complex, information-intensive marketplace. Further, many consumers are increasingly interested in knowing the position and activities of enterprises on a broad range of economic, social and environmental issues, and in taking these into account when choosing goods and services.
83. The chapeau calls on enterprises to apply fair business, marketing and advertising practices and to ensure the quality and reliability of the products that they provide. These principles, it is noted, apply to both goods and services.

84. Paragraph 1 underscores the importance for enterprises to adhere to required health and safety standards and the importance for them to provide consumers with adequate health and safety information on their products.

85. Paragraph 2 concerns information disclosure. It calls for enterprises to provide information which is sufficient for consumers to make informed decisions. The way information is provided in the online area should be tailored and adapted to the consumer’s means of access. This would include information on the financial risks associated with products, where relevant. Furthermore, in some instances enterprises are legally required to provide information in a manner that enables consumers to make direct comparisons of goods and services (for example, unit pricing). In the absence of direct legislation, enterprises are encouraged to present information, when dealing with consumers, in a way that facilitates comparisons of goods and services and enables consumers to easily determine what the total cost of a product will be. It should be noted that what is considered to be “sufficient” can change over time and enterprises should be responsive to these changes. Any product and environmental or social claims that enterprises make should be based on adequate evidence and, as applicable, proper tests and verification. Claims may apply both to the way a product or service was produced and to the attributes of the product or service itself. Given consumers' growing interest in environmental and social issues and sustainable consumption, information should be provided, as appropriate, on the environmental or social attributes of products and services. This could include information on the energy efficiency and the degree of recyclability, durability, and reparability of products and the sustainability attributes of financial products and services or, for example, in the case of food products, information on agricultural practices or nutritional attributes.

86. Business conduct is increasingly considered by consumers when making their purchasing decisions. Enterprises are therefore encouraged to make information available on initiatives they have taken to integrate social and environmental concerns into their business operations and to otherwise support sustainable consumption. Chapter III of the Guidelines on Disclosure is relevant in this regard. Enterprises are there encouraged to communicate value statements or statements of business conduct to the public, including information on the social, ethical and environmental policies of the enterprise and other codes of conduct to which the company subscribes. Enterprises are encouraged to make this information available in plain language and in a format that is appealing to consumers. Enterprises should also assure the accuracy of any claim regarding environmental or social performance. Growth in the number of enterprises reporting in these areas and targeting information to consumers would be welcome.

87. Paragraph 3 reflects language that is used in the 2007 Council Recommendation on Consumer Dispute Resolution and Redress. The Recommendation establishes a framework for developing effective approaches to address consumer complaints, including a series of actions that industry can take in this respect. It is noted that the mechanisms that many enterprises have established to resolve consumer disputes have helped increase consumer confidence and consumer satisfaction. These mechanisms can provide more practicable solutions to complaints than legal actions, which can be expensive, difficult and time consuming for all the parties involved. For these non-judicial mechanisms to be effective, however, consumers need to be made aware of their existence and would benefit from guidance on how to file complaints, especially when claims involve cross-border or multi-dimensional transactions.

88. Paragraph 4 concerns deceptive, misleading, fraudulent and other unfair commercial practices. Such practices can distort markets, at the expense of both consumers and responsible enterprises and should be avoided.

89. Paragraph 5 concerns consumer education, which has taken on greater importance with the growing complexity of many markets and products. Governments, consumer organisations and many enterprises have recognised that this is a shared responsibility and that they can play important roles in this regard. The difficulties that consumers have experienced in evaluating complex products in financial and other areas have underscored the importance for stakeholders to work together to promote education aimed at improving consumer decision-making.
90. Paragraph 6 concerns personal data. The increasing collection and use of personal data by enterprises can pose great risks to the privacy of consumers and their well-being, fuelled in part by the Internet and technological advances, has highlighted the importance of protecting The protection of personal data of consumers, including data security against consumer privacy violations, including security breaches is therefore of great importance.

91. Paragraph 7 underscores the importance of enterprises to work with public authorities to help prevent and combat deceptive marketing practices more effectively. Co-operation is also called for to diminish or prevent threats risks to public health and safety and to the environment. This includes threats risks associated with the disposal of goods, as well as their consumption and use. This reflects recognition of the importance of considering the entire life cycle of products and managing risks to the safety of products throughout their lifetime, in particular at the design, manufacture, distribution, use and disposal stages.

92. Paragraph 8 calls on enterprises to take the situations of vulnerable and disadvantaged consumers into account when they market goods and services. Disadvantaged or vulnerable consumers refer to particular consumers or categories of consumers, who because of personal characteristics or circumstances (like age, mental or physical capacity, education, income, language or remote location) may meet particular difficulties in operating in today’s information-intensive, globalised markets. The paragraph also highlights the growing importance of mobile and other forms of e-commerce in global markets. The benefits that such commerce provides are significant and growing. But there are also risks for consumer harm. Governments have spent considerable time examining ways to ensure that consumers are afforded transparent and effective protection that is not less in the case of e-commerce than the level of protection afforded in more traditional forms of commerce. It is therefore important that enterprises take steps to reduce the risks of e-commerce so that the level of protection is not less than that provided in more traditional forms of commerce.
Chapter IX. Science and Technology and Innovation

Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter IX. Science, Technology and Innovation

Full edited text of Chapter IX. Science and Technology

Enterprises should, as appropriate, contribute to the development of local and national innovative capacity. Enterprises should carry out due diligence to ensure that the development, financing, sale, licensing, trade and use of technology, including gathering and using data, as well as scientific research and innovation, is done in a way that is consistent with the Guidelines as well as with applicable national laws and requirements, including privacy and data protection requirements and export control regulations. In particular, enterprises should:

1. Endeavour to ensure that their activities are compatible with the science and technology (S&T) policies and plans of the countries in which they operate and as appropriate contribute to the development of local and national innovative capacity.

2. (New paragraph) Carry out risk-based due diligence, as described in Chapter II in the context of development, financing, licensing, sale, trade and/or use of technology, including with respect to gathering and using data, end-use, as well as in the context of scientific research and innovation.

3. Adopt, where practicable in the course of their business activities, practices that enable the voluntary, safe, secure and efficient transfer and rapid diffusion of technology and know-how on mutually agreed terms, as well as enhance access to and sharing of data to foster scientific discovery and innovations with due regard to the protection of intellectual property rights, confidentiality obligations and privacy, personal data protection and non-discrimination principles.

4. When appropriate, perform science and technology development work activities in host countries to address local market needs, as well as employ host country personnel in S&T capacity science and technology development activities, and encourage their training, taking into account integrity and commercial needs.

5. Where relevant to commercial objectives, develop ties with local universities higher education institutions, public research institutions and participate in co-operative research projects with local industry or industry associations, including SMEs and civil society organisations. Such cooperation should take into account effective risk management, ethical considerations, national security concerns, applicable laws and considerations of stakeholders, while
recognising the value of open science and safeguards to preserve academic freedom and research and scientific autonomy.

6. (New paragraph) When collecting, sharing and using data, enhance transparency of data access and sharing arrangements, and encourage the adoption of responsible data governance practices throughout the data value cycle that meet technical, organisational, and legal standards and obligations that are applicable, recognised or widely accepted among governments adhering to the Guidelines, including codes of conduct, ethical principles, rules regarding manipulation and coercion of consumers, and privacy and data protection regulation.

7. (New paragraph) Enterprises should support, as appropriate to their circumstances, cooperative efforts in the appropriate fora to promote Internet Freedom, including through respect of the freedoms of expression, peaceful assembly and association online, consistent with the matters covered by the Guidelines.

Commentary on Science, Technology and Innovation

93. (New paragraph) The development, licensing, sale, trade and use of technology has a profound impact on the matters covered by the Guidelines, including sustainable development, human rights, economic participation, the quality of democracy, social cohesion, climate change, the global business and labour landscape and market dynamics. Scientific research and technological innovation has driven productivity in all sectors, as well as the ability of enterprises to conduct due diligence and contribute to sustainable development, but can also be associated with challenges and adverse impacts. The chapeau of this chapter extends expectations of the Guidelines to actual and potential adverse impacts related to science, technology and innovation.

94. (New paragraph) Science is understood here as including, among other issues, research and exploration. Technology is understood here to include digital technology, non-digital technology, and digital services, as well as digital ecosystems that facilitate their development and use. Innovation is understood here as a new or improved product or process that has been made available to potential users or brought into use by the enterprise.

95. (New paragraph) Given the evolving nature of this topic and the fact that it touches on many issues, the scope of this chapter is meant to be broad and inclusive to ensure its continued relevance in relation to risks associated with future science, technology and innovation developments.

96. (Originally paragraph 93) In a knowledge-based and globalised economy where national borders matter less, even for small or domestically oriented enterprises, the ability to access and utilise technology, data and know-how is essential for improving enterprise performance. Such access is also important for the realisation of the economy-wide effects of technological progress, including productivity growth and job creation, within the context of sustainable development. Multinational enterprises are the main conduit of technology transfer across borders. They can contribute to the national innovative capacity of their host countries by generating, diffusing, and even enabling the use of new technologies by domestic enterprises and institutions. R&D activities of MNEs and investments in new technologies, when well connected to the national innovation system, can help enhance the economic and social progress in their host countries. In turn, the development of a dynamic innovation system in the host country expands commercial opportunities for MNEs.

97. (Originally paragraph 94) The chapter thus aims to promote the diffusion by multinational enterprises of the fruits of research and development activities among the countries where they operate, contributing thereby to the innovative capacities of host countries, within the limits imposed by economic feasibility, competitiveness concerns, and in line with privacy, data protection, security, intellectual property protection and confidentiality obligations. In this regard, fostering technology diffusion can include the commercialisation of products and
services which imbed new technology, licensing of process innovations, hiring and training of S&T personnel and development of R&D co-operative ventures. The chapter thus aims to promote the diffusion by multinational enterprises of the fruits of research and development activities among the countries where they operate, contributing thereby to the innovative capacities of host countries, within the limits imposed by economic feasibility, competitiveness concerns, and in line with privacy, data protection, security, intellectual property protection and confidentiality obligations. In this regard, fostering technology diffusion can include the commercialisation of products and services which imbed new technology, licensing of process innovations, hiring and training of S&T personnel and development of R&D co-operative ventures. When selling or licensing technology, not only should the terms and conditions negotiated be reasonable mutually agreed, but MNEs may want to should consider the long-term developmental, environmental and societal impacts of technology for the home and host country. In their activities, multinational enterprises can establish and improve the innovative capacity of their international subsidiaries, and subcontractors, and other entities with which they have business relationships. In addition, MNEs can call attention to the importance of local scientific and technological infrastructure, both physical and institutional. In this regard, MNEs can usefully contribute to the formulation by host country governments of policy frameworks conducive to the development of dynamic innovation systems.

98. Data is understood here and in relevant OECD Recommendations to refer to recorded information in structured or unstructured formats, including text, images, sound, and video. Data-driven innovation and data-intensive science hold immense promise to address grand societal challenges. Open science initiatives and access to data has had far-reaching effects on the reproducibility of scientific results, diffusion of knowledge across society, cross-disciplinary co-operation, resource efficiency, productivity and competitiveness. Data flows across borders are critical to support international commerce, information and knowledge exchange to bridge digital divides and to support sustainable development. Paragraph 2 reinforces these benefits, but also acknowledges risks of data theft and privacy impacts. Enterprises in the data ecosystem, including data holders, data producers, and data intermediaries, as defined in the OECD Recommendation of the Council on Enhancing Access to and Sharing of Data [OECD/LEGAL/0463], are encouraged to consider recommendations on responsible data access, sharing and use as outlined in the said Recommendation, which seeks to ensure implementation of risk management measures throughout the data value cycle, including measures necessary to protect the confidentiality, integrity, security and availability of data, particularly in the context of managing biological data such as DNA, and when disclosing data to law enforcement and other government agencies.

99. In paragraph 4, the expectations on enterprises are meant to be proportional to avoid terms and conditions which result in unintended consequences. Certain actors can also seek to benefit from technology transfer in order to misuse civilian technology.

100. Due diligence in context of downstream business relationships in the technology sector is subject to relevant considerations outlined in Chapter II. Thus, when selling, licensing or exporting technology that presents known or foreseeable circumstances for the use of the product or service provided in accordance with its intended purpose, or under conditions of reasonably foreseeable improper use or misuse, which may give rise to adverse impacts, enterprises should conduct risk-based due diligence in determining whether to proceed with the sale, with due regard for export control requirements, and seek to prevent and mitigate potential adverse impacts to the extent possible. Enterprises should also consider OECD Recommendations described in the following paragraphs that have been developed to mitigate against technology specific risks.

101. Enterprises involved in the development of new technology or new applications of existing tools should anticipate to the extent feasible and, as appropriate, address ethical, legal and social challenges raised by novel technology while promoting responsible innovation and engaging in dialogue and information sharing with local regulatory authorities. In addition to and as support in the implementation of the recommendations of the Guidelines, enterprises are encouraged to consider available guidance on the innovation process, including but not limited to the OECD Recommendation of the Council on Artificial Intelligence [OECD/LEGAL/0449] and the OECD Recommendation of the Council on Responsible Innovation in Neurotechnology [OECD/LEGAL/0437].
102. In all activities concerning children and youth participation in, or engagement with the digital environment, enterprises should take into account, as appropriate, the child’s best interests as a primary consideration and in their due diligence identify how the rights of children and youth can be respected and the well-being of children and youth can be protected in the digital environment, and take appropriate measures to do so consistent with the OECD Recommendation of the Council on Children in the Digital Environment [OECD/LEGAL/0389] and the OECD Guidelines for Digital Service Providers.

103. Digital security is a shared responsibility across all stakeholders, including businesses, customers and governments. Digital security incidents, such as unauthorised access to systems or software, compromised accounts, loss or theft of data, or interference with IT resources, can harm businesses, governments and individuals by undermining the availability, integrity and/or confidentiality of their data, information systems and networks. Enterprises should conduct digital security risk management in a manner that is consistent with the other chapters of the Guidelines. Privacy-by-design principles, use of strong encryption, permission and access management protocols, and other best practices can reduce threats and mitigate harm. Enterprises should also take into account the guidance set out in the OECD Recommendation of the Council on Digital Security Risk Management for Economic and Social Prosperity [OECD/LEGAL/0415], the OECD Recommendation of the Council on Enhancing Access to and Sharing of Data [OECD/LEGAL/0463], and the OECD Recommendation of the Council concerning Guidelines Governing the Protection of Privacy and Transborder Flows of Personal Data [OECD/LEGAL/0188].

104. Paragraph 7 is without prejudice to positions held by governments in the area of electronic commerce at the World Trade Organisation (WTO). It is not intended to disregard other important public policy interests which may relate to the use of the internet which would need to be taken into account. *Some countries have referred to the 2005 Tunis Agenda for the Information Society in this regard.*
Enterprises should:

1. Carry out their activities in a manner consistent with all applicable competition laws and regulations, taking into account the competition laws of all jurisdictions in which the activities may have anti-competition effects.

2. Refrain from entering into or carrying out anti-competitive agreements among competitors, including agreements to:
   a) fix prices;
   b) make rigged bids (collusive tenders);
   c) establish output restrictions or quotas; or
   d) share or divide markets by allocating customers, suppliers, territories or lines of commerce.

3. Co-operate with investigating competition authorities by, among other things and subject to applicable law and appropriate safeguards, providing responses as promptly and completely as practicable to requests for information, and considering the use of available instruments, such as waivers of confidentiality where appropriate, to promote effective and efficient co-operation among investigating authorities.

4. Regularly promote employee awareness of the importance of compliance with all applicable competition laws and regulations, and, in particular, train senior management of the enterprise in relation to competition issues.

Commentary on Competition

95. These recommendations emphasise the importance of competition laws and regulations to the efficient operation of both domestic and international markets and reaffirm the importance of compliance with those laws and regulations by domestic and multinational enterprises. They also seek to ensure that all enterprises are aware of developments concerning the scope, remedies and sanctions of competition laws and the extent of co-operation among competition authorities. Enterprises should take into account applicable competition laws and regulations when engaging in collaborative initiatives related to RBC or due diligence. The term "competition" law is used to refer to laws, including both "antitrust" and "antimonopoly" laws, that variously prohibit: a) anti-competitive agreements; b) the abuse of market power or of dominance; c) the acquisition of market power or dominance by means other than efficient performance; or d) the substantial lessening of competition or the significant impeding of effective competition through mergers or acquisitions.

96. In general, competition laws and policies prohibit: a) hard core cartels; b) other anti-competitive agreements; c) anti-competitive conduct that exploits or extends market dominance or market power; and d) anti-competitive mergers and acquisitions. Under the 1998 Recommendation of the OECD Council Concerning Effective Action Against Hard Core Cartels, C(98)35/FINAL, the anticompetitive agreements referred to in sub a) constitute hard core cartels, but the Recommendation incorporates differences in member countries' laws, including differences in the laws' exemptions or provisions allowing for an exception or authorisation for activity that might otherwise be prohibited. The recommendations in these Guidelines do not suggest that enterprises should forego availing themselves of such legally available exemptions or provisions. The categories sub b) and c) are more general because the effects of other kinds of agreements and of
unilateral conduct are more ambiguous, and there is less consensus on what should be considered anti-competitive.

97. The goal of competition policy is to contribute to overall welfare and economic growth by promoting market conditions in which the nature, quality, and price of goods and services are determined by competitive market forces. In addition to benefiting consumers and a jurisdiction’s economy as a whole, such a competitive environment rewards enterprises that respond efficiently to consumer demand. Enterprises can contribute to this process by providing information and advice when governments are considering laws and policies that might reduce efficiency or otherwise reduce the competitiveness of markets.

98. Enterprises should be aware that competition laws continue to be enacted, and that it is increasingly common for those laws to prohibit anti-competitive activities that occur abroad if they have a harmful impact on domestic consumers. Moreover, cross-border trade and investment makes it more likely that anti-competitive conduct taking place in one jurisdiction will have harmful effects in other jurisdictions. Enterprises should therefore take into account both the law of the country in which they are operating and the laws of all countries in which the effects of their conduct are likely to be felt.

99. Finally, enterprises should recognise that competition authorities are engaging in more and deeper co-operation in investigating and challenging anti-competitive activity. See generally: OECD instruments on competition policy including the OECD Recommendation of the Council Concerning International Co-operation on Competition Investigations and Proceedings [OECD/LEGAL/0408] and the OECD Recommendation of the Council on Fighting Bid Rigging in Public Procurement [OECD/LEGAL/0396]. Recommendation of the Council Concerning Cooperation between Member Countries on Anticompetitive Practices Affecting International Trade, C(95)130/FINAL; Recommendation of the Council on Merger Review, C(2005)34. When the competition authorities of various jurisdictions are reviewing the same conduct, enterprises’ facilitation of co-operation among the authorities promotes consistent and sound decision-making and competitive remedies while also permitting cost savings for governments and enterprises.

100. While in many cases enterprises can collaborate on RBC initiatives and due diligence efforts without breaching competition law, enterprises and the collaborative initiatives in which they are involved should take proactive steps to understand competition law issues in their jurisdiction and avoid activities which could represent a breach of competition law.

101. Enterprises are subject to competition law when buying labour input from workers in a similar way as when buying other goods and services. Severe sanctions may be applied in the case of collusion between employers on salaries (wage-fixing) and hiring practices (such as no-poach and no-hiring agreements). Enterprises should therefore ensure they comply with competition law in their recruitment and employment policies, and when planning mergers and acquisitions.
Targeted Updates to OECD Guidelines for Multinational Enterprises: Chapter XI. Taxation

Full edited text of Chapter XI. Taxation

1. It is important that enterprises contribute to the public finances of host countries by making timely payment of their tax liabilities. In particular, enterprises should comply with both the letter and spirit of the tax laws and regulations of the countries in which they operate. Complying with the spirit of the law means discerning and following the intention of the legislature. It does not require an enterprise to make payment in excess of the amount legally required pursuant to such an interpretation. Tax compliance includes such measures as providing to the relevant authorities timely information that is relevant or required by law for purposes of the correct determination of taxes to be assessed in connection with their operations and conforming transfer pricing practices to the arm’s length principle.

2. Enterprises should treat tax governance and tax compliance as important elements of their oversight and broader risk management systems. In particular, corporate boards should adopt tax risk management strategies to ensure that the financial, regulatory and reputational risks associated with taxation are fully identified and evaluated.

Commentary on Taxation

102. Corporate citizenship in the area of taxation implies that enterprises should comply with both the letter and the spirit of the tax laws and regulations in all countries in which they operate, co-operate with authorities and make information that is relevant or required by law available to them. An enterprise complies with the spirit of the tax laws and regulations if it takes reasonable steps to determine the intention of the legislature and interprets those tax rules consistent with that intention in light of the statutory language and relevant, contemporaneous legislative history. Transactions should not be structured in a way that will have tax results that are inconsistent with the underlying economic consequences of the transaction unless there exists specific legislation designed to give that result. In this case, the enterprise should reasonably believe that the transaction is structured in a way that gives a tax result for the enterprise which is not contrary to the intentions of the legislature.

103. Tax compliance also entails co-operation with tax authorities and provision of the information they require to ensure an effective and equitable application of the tax laws. Such co-operation should include responding in a timely and complete manner to requests for information made by a competent authority pursuant to the provisions of a tax treaty or exchange of information agreement. However, this commitment to provide information is not without limitation. In particular, the Guidelines make a link between the information that should be provided and its relevance to the enforcement of applicable tax laws. This recognises the need to balance the burden on business in complying with applicable tax laws and the need for tax authorities to have the complete, timely and accurate information to enable them to enforce their taxlaws.

104. Enterprises’ commitments to co-operation, transparency and tax compliance should be reflected in risk management systems, structures and policies. In the case of enterprises having a corporate legal form, corporate boards are in a position to oversee tax risk in a number of ways. For example, corporate boards should proactively develop appropriate tax policy principles, as well as establish internal tax control systems so that the actions of management are consistent with the views of the board with regard to tax risk. The board should be informed about all potentially material tax risks and responsibility should be assigned for performing internal tax control functions and reporting to the board. A comprehensive risk management strategy that includes tax will allow the enterprise to not only act as a good corporate citizen but also to effectively manage tax risk, which can serve to avoid major financial, regulatory and reputation risk for an enterprise.

105. Tax transparency supports the integrity of a country’s tax system and is an important way of ensuring and demonstrating that enterprises comply with the letter and spirit of tax laws. A
member of a multinational enterprise group in one country may have extensive economic relationships with members of the same multinational enterprise group in other countries. Such relationships may affect the tax liability of each of the parties. Accordingly, tax authorities may need information from outside their jurisdiction in order to be able to evaluate those relationships and determine the tax liability of the member of the MNE group in their jurisdiction. Again, the information to be provided is limited to that which is relevant to or required by law for the proper evaluation of those economic relationships for the purpose of determining the correct tax liability of the member of the MNE group. MNEs should co-operate in providing that information. A number of actions of the OECD/G20 Inclusive Framework on Base Erosion and Profit Shifting (BEPS) project are aimed at improving transparency, such as the preparation and exchange of Country-by-Country Reports (BEPS Action 13), the compulsory spontaneous exchange of relevant information on taxpayer-specific rulings (BEPS Action 5), and the mandatory disclosure rules regarding aggressive tax planning schemes (BEPS Action 12).

106. Transfer pricing is a particularly important issue for corporate citizenship and taxation. The dramatic increase in global trade and cross-border direct investment (and the important role played in such trade and investment by multinational enterprises) means that transfer pricing is a significant determinant of the tax liabilities of members of a multinational enterprise group because it materially influences the division of the tax base between countries in which the multinational enterprise operates. The arm’s length principle which is included in both the OECD Model Tax Convention and the UN Model Double Taxation Convention between Developed and Developing Countries, is the internationally accepted standard for adjusting the profits between associated enterprises. Application of the arm’s length principle avoids inappropriate shifting of profits or losses and minimises risks of double taxation. Its proper application requires multinational enterprises to co-operate with tax authorities and to furnish all information that is relevant or required by law regarding the selection of the transfer pricing method adopted for the international transactions undertaken by them and their related party. It is recognised that determining whether transfer pricing adequately reflects the arm’s length standard (or principle) is often difficult both for multinational enterprises and for tax administrations and that its application is not an exact science.

107. The Committee on Fiscal Affairs of the OECD undertakes ongoing work to develop recommendations for ensuring that transfer pricing reflects the arm’s length principle. Its work resulted in the publication in 1995 of the OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations (OECD Transfer Pricing Guidelines) which was the subject of the Recommendation of the OECD Council on the Determination of Transfer Pricing between Associated Enterprises (members of an MNE group would normally fall within the definition of Associated Enterprises). The OECD Transfer Pricing Guidelines and that Council Recommendation are updated on an ongoing basis to reflect changes in the global economy and experiences of tax administrations and taxpayers dealing with transfer pricing. Importantly, the Council Recommendation was revised in 2017 to reflect the endorsement by the Council of the BEPS package, to strengthen the impact and relevance of the Transfer Pricing Guidelines outside OECD Membership, and to provide greater clarity and legal certainty to governments and taxpayers on the status of future revisions to the Transfer Pricing Guidelines by supporting their timely implementation. The arm’s length principle as it applies to the attribution of profits of permanent establishments for the purposes of the determination of a host State’s taxing rights under a tax treaty was the subject of an OECD Council Recommendation adopted in 2008.

108. The OECD Transfer Pricing Guidelines focus on the application of the arm’s length principle to evaluate the transfer pricing of associated enterprises. The OECD Transfer Pricing Guidelines aim to help tax administrations (of both OECD member countries and non-member countries) and multinational enterprises by indicating mutually satisfactory solutions to transfer pricing cases, thereby minimising conflict among tax administrations and between tax administrations and multinational enterprises and avoiding costly litigation. Multinational enterprises are encouraged to follow the guidance in the OECD Transfer Pricing Guidelines, as amended revised and supplemented, in order to ensure that their transfer prices reflect the arm’s length principle.

109. The coherence and consistency of the international tax architecture that applies to multinational enterprise groups was more broadly reinforced through the OECD/G20 BEPS Project. Notably the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (OECDLEGAL/0432) facilitates implementation of a number of measures to tackle tax avoidance and to improve the coherence of international tax rules, including minimum standards for the avoidance of treaty abuse and for the improvement of dispute resolution. The success of this system is premised on a network of positive relationships, co-operation and reciprocity.
Footnote 7:

One non-OECD adhering country, Brazil, does not apply the OECD Transfer Pricing Guidelines in its jurisdiction and accordingly the use of the guidance in those Guidelines by multinational enterprises for the purposes of determining taxable income from their multinational enterprises’ operations in this country does not apply in the light of the tax obligations currently set out in the legislation of this country. One other non-OECD adhering country, Argentina, points out that the OECD Transfer Pricing Guidelines are not compulsory in its jurisdiction.
Part II. Targeted Updates to the Implementation Procedures of the OECD Guidelines for Multinational Enterprises

This section reproduces the Implementation Procedures, namely the Council Decision and Procedural Guidance [OECD/LEGAL/0307] as well as the Commentary thereto and sets out annotated draft targeted updates in manual track changes with proposed deleted text in strikethrough.
Decision of the Council on the OECD Guidelines for Multinational Enterprises

[Preamble to be updated]

I. [National Contact Points]

1. Adhering countries shall set up National Contact Points to further the effectiveness of the Guidelines by undertaking promotional activities, handling enquiries and contributing to the resolution of issues that arise relating to the implementation of the Guidelines in specific instances, taking account of National Contact Points shall have the following responsibilities:

   a) Promote awareness and uptake of the Guidelines, including by responding to enquiries;
   b) Contribute to the resolution of issues that arise in relation to the implementation of the Guidelines in specific instances.

In addition, where appropriate and in coordination with relevant government agencies, NCPs may also provide support to efforts by their government to develop, implement, and foster coherence, of policies to promote RBC.

The business community, worker organisations, other non-governmental organisations and other interested parties shall be informed of the availability of such facilities National Contact Points.

2. National Contact Points in different countries shall co-operate, if such need arises, on any matter related to the Guidelines relevant to their activities. As a general procedure, discussions at the national level should be initiated before contacts with other National Contact Points are undertaken.

3. National Contact Points shall meet regularly to share experiences and report to the Investment Committee.

4. Adhering countries shall make available human and financial resources to their National Contact Points so that they can effectively fulfil their responsibilities, taking into account internal budget priorities capacity and practices.

5. Adhering countries shall undertake periodic peer reviews of their NCPs, subject to modalities adopted by the WPRBC.

II. The Investment Committee and the Working Party for Responsible Business Conduct

1. The Investment Committee (“the Committee”) shall oversee the implementation of the Declaration on International Investment and Multinational Enterprises. The WPRBC shall assist the Committee in implementing section I of the Declaration with respect to its responsibilities in relation to the Guidelines.

   a) shall periodically or at the request of an adhering country hold exchanges of views on matters covered by the Guidelines and the experience gained in their application.

   b) The Committee shall periodically or at the request of an adhering country hold exchanges of views on matters covered by the Guidelines and the experience gained in their application. The Committee shall periodically invite the Business and Industry Advisory Committee to the OECD (Business at OECD, BIAC), the Trade Union Advisory Committee to the OECD (TUAC) (the “advisory bodies”), and OECD Watch, as well as other international partners to express their views on matters covered by the Guidelines. In addition, exchanges of views with them on these matters may be held at their request.

   c) The Committee shall engage with non-adhering countries on matters covered by the Guidelines in order to promote responsible business conduct worldwide in accordance with the Guidelines and to create a level playing field. It shall also strive to co-operate with non-adhering countries that have a special interest in the Guidelines and in promoting their principles and standards.
4. The Committee shall be responsible for clarification of the Guidelines. Parties involved in a specific instance that gave rise to a request for clarification will **shall** be given the opportunity to express their views either orally or in writing. The Committee shall not reach conclusions on the conduct of individual enterprises.

5. The Committee shall hold exchanges of views on the activities of National Contact Points with a view to enhancing the effectiveness of the Guidelines and fostering functional equivalence of National Contact Points.

6. In fulfilling its responsibilities for the effective functioning of the Guidelines, the Committee shall take due account of the attached procedural guidance.

7. The Committee shall periodically report to the Council on matters covered by the Guidelines. In its reports, the Committee shall take account of reports by National Contact Points and the views expressed by the advisory bodies (**BIAC** and **TUAC**), OECD Watch, other international partners and non-adhering countries as appropriate.

8. The Committee shall, in co-operation with National Contact Points, pursue a proactive agenda that **proactively** promotes the effective observance by enterprises of the principles and standards contained in the Guidelines. It shall, in particular, seek opportunities to collaborate with the advisory bodies (**BIAC** and **TUAC**), OECD Watch, other international partners and other stakeholders in order to encourage the positive contributions that multinational enterprises can make, in the context of the Guidelines, to economic, environmental and social progress with a view to achieving sustainable development, and to help them identify and respond to risks of adverse impacts associated with particular products, regions, sectors or industries.

### III. Implementation and Review of the Decision

1. The Procedures attached to this Decision set out expectations, recommendations and guidance applicable to adhering countries, NCPs, the Committee, and the WPRBC in the implementation of this decision.

2. This Decision shall be periodically reviewed. The Committee shall make proposals for this purpose, and the WPRBC may develop and submit such proposals to the Committee.
I. National Contact Points

The role of National Contact Points (NCPs) is to further the effectiveness of the Guidelines. NCPs will operate in a manner that is:

1. visible,
2. accessible,
3. transparent,
4. accountable,
5. impartial and equitable,
6. predictable, and
7. compatible with the Guidelines.

These principles together comprise the core effectiveness criteria of NCPs. NCPs, each in light of their particular circumstances, will pursue functional equivalence, meaning that all NCPs function with an equivalent degree of effectiveness, through achieving the core effectiveness criteria.

A. Institutional Arrangements

Consistent with the objective of functional equivalence and furthering the effectiveness of the Guidelines and of NCPs, adhering countries have flexibility in organising their NCPs to meet the effectiveness criteria. In determining the institutional arrangements of their NCP, Governments will seek the active support of social partners, and other stakeholders including the business community, worker organisations, other non-governmental organisations, and other interested parties, as well as other relevant Government agencies.

Accordingly, the National Contact Points:

1. Will be composed, and organised and sufficiently resourced such that they provide an effective basis for dealing with the broad range of issues covered by the Guidelines, have access to expertise on RBC, and enable the NCP to operate in an impartial manner while maintaining an adequate level of accountability to the adhering government.

2. Can use different forms of organisation to meet this objective the core effectiveness criteria and pursue functional equivalence. For example, an NCP can consist of senior representatives from one or more Ministries, may be a senior government official or a government office headed by a senior official; be an interagency or inter-ministerial body composed of, or led by, senior officials: a body composed of representatives from the business community, worker organisations and other non-governmental organisations (multi-stakeholder), and/or one that contains independent experts. Representatives of the business community, worker organisations and other non-governmental organisations may also be included.

3. Will develop and maintain meaningful relations and engage with social partners, as well as representatives of the business community, worker organisations, non-governmental organisations, and/or other interested parties that are able to contribute to the effectiveness of the Guidelines.

B. Information and Promotion
The National Contact Point will:

1. Make the Guidelines known and available by appropriate means, including through on-line information, and in national languages. **NCPs should also promote related OECD due diligence guidance on Responsible Business Conduct, Relevant stakeholders, including prospective investors (inward and outward), should be informed about the Guidelines, as appropriate.**

2. Raise awareness of the Guidelines, and their implementation procedures, **and the NCP itself**, including through co-operation, as appropriate, with **relevant government agencies**, the business community, worker organisations, other non-governmental organisations, and the interested public.

3. Respond to enquiries about the Guidelines and **OECD due diligence guidance, as well as the National Contact Point itself, including** from:
   - a) other National Contact Points;
   - b) the business community, worker organisations, other non-governmental organisations and the public; and
   - c) governments of non-adhering countries.

C. Implementation in SpecificInstances

The National Contact Point will, **serving as a non-judicial grievance mechanism**, contribute to the resolution of issues that arise relating to the implementation of the Guidelines in specific instances in a manner that is **consistent with the core effectiveness criteria listed in Section I.A. above** impartial, predictable, equitable and compatible with the principles and standards of the Guidelines. **NCPs will publish their case-handling procedures, i.e. procedures they follow in handling specific instances, which will be consistent with these Procedures, NCPs are encouraged to consult their stakeholders in developing their case-handling procedures.** The NCP will offer a forum for discussion and **use its expertise on the Guidelines to** assist the business community, worker organisations, other non-governmental organisations, and other interested parties concerned to **deal with resolve** the issues raised in an efficient and timely manner and in accordance with applicable law **and the Guidelines. Depending on the characteristics of each case, this assistance may include supporting constructive dialogue, facilitating agreements between the parties and/or issuing recommendations. The aims of such assistance may include furthering the implementation of the Guidelines in the future and/or addressing adverse impacts, consistent with the Guidelines.**

In providing this assistance, the NCP will:

1. **Where other NCPs are concerned due to the characteristics of the Specific Instance, coordinate in good faith with them to choose the lead and supporting NCPs.**

4. **Consult the parties on the issues raised and make an initial assessment of whether these issues warrant further examination and respond to the parties involved.**

2. **Where, based on an initial assessment, the NCP decides that the issues raised warrant further examination, offer good offices to help the parties involved to resolve the issues.**

For this purpose, the NCP will consult with these parties and where relevant:

a) seek advice from relevant authorities, and/or representatives of the business community, worker organisations, other non-governmental organisations, and relevant experts;

b) consult the NCP or NCPs in any other country or countries concerned;

c) seek **information on similar specific instances from the Secretariat or guidance from**
the Committee WPRBC if it has doubt about the interpretation of the Guidelines in particular circumstances. Such information and guidance is advisory, confidential and case-specific and does not amount to clarifications of the interpretation of the Guidelines, which remain the responsibility of the Committee as per Section II.2.c) below. Subject to available resources, it should be provided expeditiously to avoid delays in the handling of the case.

d) offer and, with the agreement of the parties involved, facilitate access to consensual and non-adversarial means, such as conciliation or mediation or conciliation, to assist the parties in dealing with resolving the issues.

3. 4. At the conclusion of the proceedings and after consultation with the parties involved, make the results of the proceedings publicly available, taking into account the need to protect sensitive business and other stakeholder information, by publicly issuing a final statement:

a) a statement when the NCP decides that the issues raised do not warrant merit further consideration examination. The statement should at a minimum describe the issues raised, information on timelines and parties' engagement with the process, and the reasons for the NCP’s decision;

b) a report when the parties have reached agreement on the issues raised. The report statement should at a minimum describe the issues raised, procedures the steps taken by the NCP engaged in assisting the parties, including information on parties' engagement with the process, and when agreement was reached. Information on the content of the agreement will only be included insofar as the parties involved agree thereto. The NCP may also include recommendations on the implementation of the Guidelines in its statements when an agreement has been reached, as appropriate;

c) a statement when no agreement is reached or when a party is unwilling to participate in the procedures. This statement should at a minimum describe the issues raised, the reasons why the NCP decided that the issues raised merit warranted further examination and the procedures steps taken by the NCP engaged in assisting the parties, including information on parties’ engagement with the process. The NCP will should also include make recommendations on the implementation of the Guidelines where relevant as appropriate, which should be included in the statement. Where appropriate, the statement could also include the reasons that agreement could not be reached. If allowed by applicable law and the NCP’s case-handling procedures, the NCP may, at its own discretion, set out its views in its final statement on whether the enterprise observed the Guidelines.

The NCP will notify the results of its specific instance procedures to the Committee and/or the WPRBC in a timely manner.

5. Where relevant, engage in follow-up once the Specific Instance has closed. This may involve following up on the implementation of recommendations or, if any, the agreement reached by the parties, offering a further opportunity for good offices where appropriate, and publishing a follow up statement, as appropriate. Any follow-up that the NCP intends to undertake should also be referred to in the final statement.

4.6. In order to build trust among parties, facilitate resolution of the issues raised, take appropriate steps to act with transparency and make parties to a specific instance aware of all relevant facts and arguments brought to the NCP by other parties, in particular during the good offices phase. However, upon a reasonable request by a party, for example to protect sensitive business and other information and/or the interests of other stakeholders involved in the specific instance, and in the interest of resolving the issues, the NCP may keep certain information confidential from the other party.

7. While the procedures under paragraph 2 are underway, confidentiality of the proceedings will be maintained. At the conclusion of the procedures, if the parties involved have not agreed on a
resolution of the issues raised, they are free to communicate about and discuss these issues. However, information and views provided in the proceedings, facts and arguments shared by the other party (including where relevant an external mediator or conciliator), during the proceedings by another party involved will, unless that other sharing party agrees to their disclosure, such facts and arguments are already in the public domain or the not disclosing would be contrary to the provisions of national law.

5.8 If issues arise in non-adhering countries, take steps to develop an understanding of the issues involved, and follow these procedures where relevant and practicable.

Throughout the process, NCPs should take all appropriate steps within their capacities to address risks of undue pressure or reprisals against parties to a specific instance. If they become aware of an actual or potential instance of undue pressure or reprisal, NCPs should, to the extent possible, support the party at risk in avoiding and mitigating any harm, in consultation with the party at risk and, if accepted by that party, relevant authorities. Governments should also take relevant steps to protect the NCP and its members from undue pressure or reprisals.

[New heading] D. Support for policies to promote RBC

In furthering the effectiveness of the Guidelines, NCPs may, where appropriate and in coordination with relevant government agencies, support efforts by their government to develop, implement, and foster coherence of policies aimed at promoting RBC. Such support would notably only be appropriate where feasible in light of their capacity to fulfil their responsibilities under the Decision.

D. E. Reporting

1. Each NCP will report annually to the Committee.
2. Reports should contain information on the nature and results of the activities of the NCP, including implementation activities in specific instances.

[New heading] F. Peer reviews

Adhering countries will undertake periodic peer reviews of their NCP organised by the Secretariat, as a means to increase effective implementation of the Guidelines, share best practices, and foster NCP effectiveness and functional equivalence. Modalities for periodic peer reviews, including procedures for conducting peer reviews, the duration of the peer review cycle and funding arrangements, will be approved by the WPRBC and reviewed at the end of every cycle. The first cycle of periodic peer reviews will only be launched after such modalities have been approved.

II. Investment Committee, WPRBC and the Secretariat

1. The Committee, the WPRBC and the Secretariat will consider requests from NCPs for assistance in carrying out their activities, including in the event of doubt about the interpretation of the Guidelines in particular circumstances, each in accordance with their respective responsibilities.
2. The Committee, with the assistance of the WPRBC, will, with a view to enhancing the effectiveness of the Guidelines and to fostering the functional equivalence of NCPs:
   a) consider the annual reports of NCPs described in Section I.E. Based on such reports, the WPRBC will annually issue a public report analysing the activities of NCPs.
   b) consider a substantiated submission by an adhering country, an advisory body
The Committee will approve the response by consensus. The adhering country whose NCP is the subject of a substantiated submission will participate in the process in good faith, and is expected not to block consensus except in exceptional circumstances.

c) consider issuing a clarification of the interpretation of the Guidelines where at the request of an adhering country, an advisory body (BIAC or TUAC) or OECD Watch makes a substantiated submission. Such request may concern on whether an NCP has correctly interpreted the Guidelines in specific instances, but in such cases, the Committee will not reach conclusions on the conduct of individual enterprises;

d) make recommendations, as necessary, to improve the functioning of NCPs and the effective implementation of the Guidelines. When, based on the last two annual reporting cycles and upon proposal by the WPRBC, the Committee determines that an NCP has, for an extended period of time and without legitimate reason, manifestly not been operating in a way consistent with these Procedures, it may make appropriate recommendations to the adherent country and invite it to report back within a set timeframe, and the Committee may do so repeatedly until it is satisfied that the issues have been addressed. The Committee and the WPRBC will reach decisions on these matters by consensus. The adhering country whose NCP is concerned will participate in the process in good faith, and is expected not to block consensus except in exceptional circumstances;

e) co-operate with international partners;

f) engage with interested non-adhering countries on matters covered by the Guidelines and their implementation.

3. The Committee and the WPRBC may seek and consider advice from experts on any matters covered by the Guidelines. For this purpose, the Committee will decide on suitable procedures.

4. The Committee and the WPRBC will discharge their responsibilities in an efficient and timely manner.

5. In discharging their responsibilities, the Committee and the WPRBC will be assisted by the Secretariat, which, under the overall guidance of the Investment Committee and the WPRBC, and subject to the Organisation’s Programme of Work and Budget, will:

a) serve as a central point of information for NCPs that have questions on the promotion, interpretation, and implementation of the Guidelines;

b) collect and make publicly available – including in supporting the WPRBC with the publication of the annual report analysing NCP activities under II. 2. A) above – relevant information on recent trends and emerging practices with regard to the NCPs’ institutional arrangements, promotional activities of NCPs and the implementation of the Guidelines in specific instances. The Secretariat will develop unified reporting formats to support the establishment and maintenance of an up-to-date database on specific instances and conduct regular analysis of these specific instances;

c) facilitate peer learning activities, including voluntary peer evaluations, as well as capacity building and training, in particular for NCPs of new adhering countries and new NCP personnel, on the implementation procedures of the Guidelines and their Implementation Procedures such as promotion and the facilitation of conciliation and mediation;

d) organise periodic peer reviews of NCPs as indicated under Section I.F. of the Procedures;

e) facilitate co-operation between NCPs where appropriate; and
promote the *Guidelines* in relevant international forums and meetings and provide support to NCPs and the Committee in their efforts to raise awareness of the *Guidelines* among non-adhering countries.
Commentary on the Implementation Procedures of the OECD Guidelines for Multinational Enterprises

1. The Council Decision represents the commitment of adhering countries to further the implementation of the recommendations contained in the text of the Guidelines. Procedural guidance for both NCPs and the Investment Committee is attached to the Council Decision and outline expectations, recommendations, and other guidance for Governments, National Contact Points (NCPs), the Investment Committee, the WPRBC and the Secretariat, without giving rise to additional rights or obligations under international law. Expectations are signaled by the use of ‘will’. Recommendations are signaled by ‘should’ or ‘encourage’. Guidance is signaled by ‘may’ or ‘can’.

2. The Council Decision sets out key adhering country responsibilities for the Guidelines with respect to NCPs, summarised as follows:
   a. Setting up NCPs (which will take account of the procedural guidance attached to the Decision), and informing interested parties of the availability of Guidelines-related facilities.
   b. Making available necessary human and financial resources.
   c. Enabling NCPs in different countries to co-operate with each other as necessary.
   d. Enabling NCPs to meet regularly and report to the Committee.

3. The Council Decision also establishes the Committee’s responsibilities for the Guidelines, including:
   - Organising exchanges of views on matters relating to the Guidelines.
   - Issuing clarifications as necessary.
   - Holding exchanges of views on the activities of NCPs.
   - Reporting to the OECD Council on the Guidelines.

4. The Investment Committee is the OECD body responsible for overseeing the functioning of the Guidelines. This responsibility applies not only to the Guidelines, but to all elements of the Declaration (National Treatment Instrument, and the instruments on International Investment Incentives and Disincentives, and Conflicting Requirements). The Committee seeks to ensure that each element in the Declaration is respected and understood, and that they all complement and operate in harmony with each other.

5. The Working Party on Responsible Business Conduct (WPRBC) is a subsidiary body of the Committee with responsibilities in relation to the Guidelines and the Decision. The Procedures list a number of ways in which the WPRBC provides assistance to the Committee, including:
Developing modalities for periodic peer reviews of NCPs, overseeing the organisation of the peer reviews by the Secretariat, and approving peer review reports;

Providing advisory guidance to NCPs who have questions regarding the interpretation of the Guidelines in particular circumstances;

Preparing Committee responses on substantiated submissions and requests for clarification of the Guidelines;

Advising the Committee on making recommendations to an adhering country whose NCP has become manifestly non-functioning for an extended period of time and without legitimate reason;

Supporting the Committee with considering annual reports of NCPs and issuing an annual public report on NCP activity.

5-6. Reflecting the increasing relevance of responsible business conduct to countries outside the OECD, the Decision provides for engagement and co-operation with non-adhering countries on matters covered by the Guidelines. This provision allows the Committee to arrange special meetings with interested non-adhering countries to promote understanding of the standards and principles contained in the Guidelines and of their implementation procedures. Subject to relevant OECD procedures, the Committee may also associate them with special activities or projects on responsible business conduct, including by inviting them to its meetings and to the Corporate Responsibility Roundtables.

6-7. In its pursuit of a proactive agenda, the Committee will co-operate with NCPs and seek opportunities to collaborate with the advisory bodies (BIAC and TUAC), OECD Watch, and other international partners with the objective of proactively promoting effective implementation of the Guidelines. In particular, as part of its work to oversee the implementation of the Declaration, the Committee, with the support of the WPRBC, will provide guidance on, and seek to enhance the capacity of business to implement, due diligence for RBC, including in specific sectors, geographies and risk areas. It will be conducted through, inter alia, multi-stakeholder engagement and taking into account the needs of small- and medium-sized enterprises, in co-operation with the NCPs. Further guidance for NCPs in this respect is provided in paragraph 1820.

I. Commentary on the Procedural Guidance for NCPs

7-8. National Contact Points have an important role in enhancing the profile and effectiveness of the Guidelines. While it is enterprises that are responsible for observing the Guidelines in their day-to-day behaviour, governments and their NCPs can contribute to improving the effectiveness of the implementation of the Guidelines procedures. To this end, they have agreed that better guidance direction for the conduct, organisation and activities of NCPs is warranted, including through regular meetings and Committee oversight.

8-9. Many of the functions and activities in the Procedural Guidance of the Decision are not new, but reflect experience and recommendations developed over the years. By making them explicit, the expected functioning of the implementation mechanisms of the Guidelines is made more transparent. All functions are now outlined in four parts of the Procedural Guidance pertaining to NCPs: institutional arrangements, information and promotion, implementation in specific instances, support for policies to promote RBC, and reporting, and peer reviews.

9-10. These four parts are preceded by an introductory paragraph that sets out the basic purpose of NCPs, together with the core effectiveness criteria and the objective of functional equivalence. Since governments are accorded flexibility in the way they organise NCPs, NCPs should all function with an equivalent degree of effectiveness, defined as ‘functional equivalence’, in a visible, accessible,
Functional equivalence is crucial to ensure the effective contribution of the entire NCP network to the implementation of the Guidelines, in particular with regard to the involvement of all NCPs in the specific instance mechanism. All NCPs, each in light of their particular circumstances, will pursue functional equivalence through achieving these core effectiveness criteria described below, which will also assist the Committee and the WPRBC in peer reviews and in discussing the conduct of NCPs.

Core Effectiveness Criteria for Functional Equivalence in the Activities of NCPs:

a. Visibility

In conformity with the Decision, adhering governments commit to set up and nominate NCPs that are easily identifiable by stakeholders and relevant government agencies within and outside their country, and also to inform the business community, worker organisations and other interested parties, including NGOs, about the availability of facilities associated with NCPs in the implementation of the Guidelines. As a basic step in this respect, NCPs will have a comprehensive website or webpage. Governments are expected to publish information about their NCPs, such as its location in government, institutional arrangements and case-handling procedures, and to take an active role in promoting the Guidelines, which could include promotional events and materials hosting seminars and meetings on the instrument. These events or materials could be arranged and prepared in co-operation with business, labour, NGOs, and other interested parties, though not necessarily with all groups on each occasion.

b. Accessibility

Easy access to NCPs is important to their effective functioning. This includes facilitating access by business, labour, NGOs, and other members of the public. Electronic communications can also assist in this regard. NCPs should respond to all legitimate requests for information, and also undertake to deal with specific issues raised by parties concerned in an efficient and timely manner. NCPs should ensure that requirements for submitting specific instances are clearly stated, easily accessible, and not unnecessarily burdensome. Where appropriate and commensurate with the NCP’s time and budget capacity, NCPs may also provide impartial and equitable assistance to the parties involved. Such assistance may concern, for example, the use of languages and translations, guidance on presenting an admissible submission and engaging in mediation, allowing flexibility regarding deadlines, or providing affordable options for participation in the process, such as remote meeting facilities.

c. Transparency

Transparency is an important criterion with respect to its contribution to the accountability of the NCP, other Core Effectiveness Criteria, and in gaining the confidence of stakeholders, parties to specific instances and the general public. Thus, as a general principle and subject to applicable law, the activities of the NCP will be transparent. For example, publishing the annual reports of NCPs to the OECD can demonstrate transparency. Nonetheless when the NCP offers its “good offices” in implementing the Guidelines in specific instances, it will can be in the interests of their effectiveness to take appropriate steps to establish confidentiality of certain aspects of the proceedings, such as outlined in Section I.C.6 of the Procedures and related Commentary. Outcomes will be transparent unless preserving confidentiality is in the best interests of effective implementation of the Guidelines.
**d. Accountability.**

In light of their more active role with respect to enhancing the profile of the Guidelines – and their potential to aid in the management of difficult issues between enterprises and the societies in which they operate – NCPs will account for also putting the activities of NCPs in the public eye. Nationally, parliaments, governments, advisory bodies of NCPs where they exist, as well as stakeholders, could have a role to play in providing feedback on the activities of NCPs with a view to continued learning and improvement. Annual reports, and regular meetings of NCPs, and peer reviews will provide an opportunity to share experiences and encourage “best practices” with respect to NCPs. The Committee and the WPRBC will also hold exchanges of views, where experiences would be exchanged and the effectiveness of the activities of NCPs could be assessed.

**e. Impartial and equitable [moved from para. 22].**

Being impartial and equitable are prerequisites for the continued confidence of stakeholders, parties to specific instances and the general public. Accordingly, governments will set up their NCPs in a way that allows them to act and be perceived as such. NCPs should will ensure impartiality in the resolution of specific instances, including by actively seeking to prevent and address potential or perceived conflicts of interests of any person playing a role on behalf of the NCP in assisting the parties with the resolution of issues raised in a specific instance. NCPs should also seek to ensure, notably through clear and accessible case-handling procedures, that the parties can engage in the process on fair and equitable terms, for example by seeking to ensure that power and resource imbalances do not prevent the parties from effectively engaging in the process, or by providing reasonable access to sources of information relevant to the procedure.

**f. Predictable [moved from para. 22].**

NCPs’ operations should will ensure predictability by providing clear and publicly available information on their role and the rules and procedures by which they operate, particularly in the resolution of specific instances. Areas where such information should be provided including:

- the provision of good offices,
- the stages of the specific instance process including indicative timeframes and criteria for initial assessment,
- expectations of good faith and confidentiality,
- the voluntary character of the process and its possible outcomes, and
- the potential role NCPs they can play in monitoring the implementation of agreements reached between the parties or recommendations by the NCP.

NCPs will publish case-handling procedures drafted in clear and accessible terms, and regularly inform parties to specific instances of the progress of the case, especially where indicative time frames set out in paras. 50 and 51 below need to be extended.

**g. Compatible with the Guidelines [moved from para. 22].**

NCPs should will operate in a way that is compatible accordance with the principles and standards contained in the Guidelines. When handling specific instances, this notably means working with parties to avoid any situation where agreements reached in the context of specific instances are contrary to the Guidelines.
Institutional Arrangements

10. NCP leadership institutional arrangements will should be such that enable the NCP to meet the core effectiveness criteria, retain maintain the constructive engagement with, and the confidence of, social partners, civil society and other stakeholders, and foster the public profile of the Guidelines. The Decision and the Procedures afford adhering countries flexibility in deciding on their NCP’s institutional arrangements, identifying some of the various possible options. They also list minimal features necessary to meet these expectations, such as having actively involved senior leadership, having sufficient human and financial resources, and having sufficient access to expertise on the issues covered by the Guidelines. To foster confidence in the NCP, governments should consult stakeholders regarding decisions that may significantly affect an NCP’s institutional arrangements.

11. Regardless of the structure adhering countries have chosen for their NCP, they can also establish advisory or oversight bodies to assist NCPs in their tasks.

12. Adequate resources are essential for the effectiveness and authority of NCPs. The Decision requires adhering countries to provide their NCPs with the human and financial resources necessary for the NCP to effectively deliver on its responsibilities. In case of staff rotation, adhering countries should ensure continuity. This can include providing proper training to new personnel, as needed and with the support of the Secretariat, and preserving institutional memory.

13. NCPs, whatever their composition, are expected to will develop and maintain meaningful relations and engage with representatives of relevant government agencies, the business community, worker organisations, other non-governmental organisations, and other interested parties, so as to gain the active support and confidence of stakeholders. To that effect, representative stakeholders may for example be equitably included in the NCP itself or in the nomination process of independent experts. Regardless of the structure adhering countries have chosen for their NCP, they can also establish and regularly convene representative multi-stakeholder and/or government-based advisory or oversight bodies or meetings to assist NCPs in their tasks, particularly if stakeholders or other government representatives are not otherwise included in their NCP’s structure.

Information and Promotion

13. The NCP functions associated with information and promotion are fundamentally important to enhancing the profile and awareness of the Guidelines with stakeholders and the general public and encouraging enterprises to act consistently with the Guidelines and OECD Due Diligence Guidance.

14. NCPs are required to make the actively promote the Guidelines better known, and are encouraged to promote the OECD due diligence guidance where relevant, notably as recommended in the Council Recommendations on such guidance. Examples of promotion activities include the provision of materials for stakeholders, or the organisation or participation in events on RBC. Events related to RBC organised by the OECD, other NCPs or relevant actors could also be promoted. Promotion activities by the NCP and related information should be easily accessible, and available online and by other appropriate means, including in national languages. English and French language versions will be available from the OECD, and website links to the Guidelines and OECD due diligence guidance on
**RBC on the NCP website should be included.** English and French language versions will be available from the OECD Secretariat.

16. As appropriate, NCPs will also **seek to offer the abovementioned activities and information in an equitable manner to a diverse and representative range of relevant stakeholders.** The Procedures mention, provide—prospective investors, both inward and outward, as an example—with information about the Guidelines. **NCPs are also encouraged to reach out to relevant government agencies and diplomatic networks, which can act as important amplifiers in to promoting the Guidelines and creating awareness of the NCP, including with stakeholders in other countries. Depending on an NCP’s context and resources, stakeholder mappings and promotional plans may assist in increasing the reach and impact of an NCP’s promotional efforts.**

15.17. NCPs should also **provide information about their responsibilities and activities in light of the core effectiveness criteria.** NCPs should promote their role in specific instances to relevant stakeholders, including, where possible and appropriate, potential submitters of specific instances. **This should include information** on the procedures that parties should follow when raising submitting or responding to a specific instance. It should include advice on the information that is necessary to raise submit a specific instance, the requirements for parties participating in specific instances, including confidentiality, and the processes and indicative timeframes that will be followed by the NCP.

16.18. In their efforts to raise awareness of the Guidelines, NCPs will co-operate with a wide variety of organisations and individuals, including, as appropriate, **relevant government agencies,** the business community, worker organisations, other nongovernmental organisations, and other interested parties. Such organisations have a strong stake in the promotion of the Guidelines and their institutional networks provide opportunities for promotion that, if used for this purpose, will greatly enhance the efforts of NCPs in this regard.

17.19. Another basic activity expected of NCPs is responding to legitimate enquiries. Three groups have been singled out for attention in this regard: i) other NCPs (reflecting a provision in the Decision); ii) the business community, worker organisations, other non-governmental organisations and the public; and iii) governments of non-adhering countries.

**Proactive Agenda**

18.20. In accordance with the Investment Committee’s proactive agenda **To support the Committee and the WPRBC in proactively promoting implementation of the Guidelines,** NCPs should maintain regular contact, including meetings, with social partners and other stakeholders in order to:

a) consider new developments and emerging practices concerning responsible business conduct;

b) support the positive contributions enterprises can make to economic, social and environmental progress;

c) participate where appropriate in collaborative initiatives to identify and respond to risks of adverse impacts associated with particular products, regions, sectors or industries.

**Peer Learning**

19.21. In addition to contributing to the Committee’s and the WPRBC’s work to enhance the effectiveness of the Guidelines, NCPs will engage in joint peer learning activities. In particular, they are encouraged to engage in horizontal, thematic peer reviews and voluntary NCP peer evaluations. Such peer learning can be carried out
through meetings at the OECD or through direct co-operation between NCPs.

[New sub-heading] Peer Reviews

22. Peer reviews are an important mechanism to increase effective implementation of the Guidelines, share best practices, and foster functional equivalence. As set out in the Decision, adhering countries commit to undertake periodic peer reviews of the NCPs. The Secretariat will organise such peer reviews under the oversight of the WPRBC. Peer reviews evaluate strengths and weaknesses of the NCP with regard to the delivery of its mandate and the effectiveness criteria defined in section I of the Procedures, and make recommendations for improvement as appropriate.

23. The modalities of the periodic peer reviews (process, duration of the review cycle and funding arrangements) will be defined in a ‘Core Template for NCP Peer Reviews’ to be approved by consensus by the WPRBC, and published on the OECD Website. The WPRBC will review the Core Template at the end of each cycle, in particular to ensure that NCPs are given enough lead time to prepare their peer reviews, and that peer reviews do not represent an unreasonable burden for governments, NCPs, the WPRBC or the Secretariat. The cycle of periodic peer reviews will not start until modalities have been approved by the WPRBC.

Implementation in Specific Instances

20-24. [Sentence moved and adapted from below] This section of the Procedures provides expectations, recommendations and guidance to NCPs on how to handle specific instances. When issues arise relating to implementation of the Guidelines in specific instances, the NCP is expected to assist in resolving them. In doing so, the NCP serves as a non-judicial grievance mechanism. Under the Decision and the Procedures, participation by the parties in such mechanism is voluntary. In that context, NCPs will aim to facilitate dialogue and seek mutually agreeable and Guidelines-compatible solutions to the issues raised, but also actively inform such dialogue with their expertise on the Guidelines. NCPs should also draft final statements in such a way as to provide assistance to the parties in resolving the issues, and to the extent possible, information and guidance to third parties on the concrete application of the Guidelines in relation to the issues raised. This section of the Procedural Guidance provides guidance to NCPs on how to handle specific instances. Each NCP will publish clear and easily accessible case-handling procedures outlining its specific instance process consistent with these Procedures. NCPs are encouraged to develop their case-handling procedures in consultation with stakeholders.

[New sub-heading] Good faith engagement

24-25. The effectiveness of the specific instances procedure depends on the good faith engagement by behaviour of all parties involved in the procedures proceedings. Good faith engagement behaviour in this context means responding in a timely fashion, respecting transparency requirements and maintaining confidentiality where appropriate and consistent with the NCP’s case-handling procedures, refraining from misrepresenting the issues and the process, notably in public communications, and from threatening or taking reprisals against parties involved in the procedure, or against the NCP itself, and genuinely engaging in the procedures with a view to finding a Guidelines-compatible solution to the issues raised in accordance with the Guidelines.
26. Should an NCP become aware of the threat of or existence of undue pressure or reprisals directed at a person involved in a specific instance, or towards the NCP or one of its members, it should take adequate steps within its capacities, and in consultation with other relevant government entities such as diplomatic missions, as appropriate, with the aim of ensuring that the person at risk has adequate protection and that the proceedings can continue in a safe, accessible, equitable and impartial manner. Before undertaking any action in this regard, the NCP will secure the consent of the party at risk. Reprisals or undue pressure may include threats to harm the individual, their family or other relations, inappropriate threats to terminate employment or benefits or inappropriate threats of legal action. Appropriate measures may include, for example, keeping the identity of the person at risk confidential, suggesting that the person at risk be represented by a trusted third party, documenting attempted reprisals in statements or assisting a person at risk in reaching out to relevant authorities.

27. Additionally, to preserve accessibility and impartiality, governments should take appropriate steps to protect the NCP and its members from undue pressure and reprisals, in line with domestic law and in consultation with competent government authorities. Governments should support measures taken by the NCP to protect itself and its members.

Guiding Principles for Specific Instances

22. Consistent with the core criteria for functional equivalence in their activities NCPs should deal with specific instances in a manner that is:

- Impartial. NCPs should ensure impartiality in the resolution of specific instances.

- Predictable. NCPs should ensure predictability by providing clear and publicly available information on their role in the resolution of specific instances, including the provision of good offices, the stages of the specific instance process including indicative timeframes, and the potential role they can play in monitoring the implementation of agreements reached between the parties.

- Equitable. NCPs should ensure that the parties can engage in the process on fair and equitable terms, for example by providing reasonable access to sources of information relevant to the procedure.

- Compatible with the Guidelines. NCPs should operate in accordance with the principles and standards contained in the Guidelines.

Coordination between NCPs in Specific Instances

23. Generally, issues will be dealt with by the NCP of the country in which the issues have arisen. Among adhering countries, such issues will first be discussed on the national level and, where appropriate, pursued at the bilateral level. The NCP of the host country should consult with the NCP of the home country in its efforts to assist the parties in resolving the issues. The NCP of the home country should strive to provide appropriate assistance in a timely manner when requested by the NCP of the host country.

28. As the Guidelines are addressed by adhering countries to enterprises operating ‘in or from’ their territory, NCPs may receive specific instances regarding issues taking place in their country or alternatively regarding issues concerning enterprises established in their country. Accordingly, certain specific instances may concern the NCPs of several countries, such as:

- where a specific instance concerns different home and host adhering countries (e.g. concerning the activities of a company headquartered
in one adherent country, carried out in another adherent country, or with different headquarters in multiple adherent countries).

- where the issues raised in a specific instance take place in several adhering countries, or concern several companies established in several adhering countries;

- where the same specific instance or related specific instances (such as specific instances involving different companies active on the same project or in the same supply chain) are submitted to several NCPs.

In such situations, NCP(s) having received the specific instance(s) will inform and coordinate with all other concerned NCPs at the outset with the goal of designating the lead and supporting NCPs and adopting coordination arrangements.

29. Generally, the NCP of the country in which the issues have arisen would be the lead NCP. However, other criteria may be applied in order to maximise the potential for contributing to the resolution of the issues raised. The parties should be kept informed with regard to coordination arrangements, and consulted on decisions to transfer the case to a different lead NCP than the NCP to which the case was submitted.

30. The lead NCP is responsible for all aspects of the specific instance process and its case-handling procedures will govern the process. Throughout the specific instance process, supporting NCPs will be kept informed of developments and may lend resources by for example reviewing statements/reports, providing translation services, supporting joint meetings with parties, and other practical assistance. Supporting NCPs will act in good faith to foster the resolution of the specific instance and all NCPs involved will ensure the confidentiality and appropriate use of information and materials received from other NCPs.

24.31. When issues arise from an enterprise’s activity that takes place in several adhering countries or from the activity of a group of enterprises organised as consortium, joint venture or other similar form, based in different adhering countries, the NCPs involved should consult with a view to agreeing on which NCP will take the lead in assisting the parties. The NCPs can seek assistance, including proposals, from the Chair of the Investment Committee WPRBC in arriving at such agreement. When discussing the selection of lead and supporting NCPs and the coordination among them, the lead NCP should consult with other NCPs, which should provide appropriate assistance when requested by the lead NCP. If the parties fail to reach consensus on an agreement, the lead NCP(s) that received the Specific Instance(s) should make a final decision in consultation with the other NCPs concerned and keep them informed regularly of the progress of the case.

Initial Assessment

25.32. After having coordinated with other NCPs concerned where relevant, the NCP will consult the parties on the issues raised and make an initial assessment of whether the issue raised merits warrants further examination, the NCP will need to determine whether the issue is bona fide and relevant to the implementation of the Guidelines. In this context, the NCP will take into account the following criteria:

- the identity of the party concerned and its interest in the matter.

- whether the issue is material and substantiated, namely whether the issues raised are of significant relevance to the implementation of the Guidelines and whether they appear plausible based on information provided, which should go beyond the submitter’s mere assertion and speculation.
• whether there seems to be a link between the enterprise’s activities and the issue raised in the specific instance.
• the relevance of applicable law and procedures, including court rulings, and how similar issues have been, or are being, treated in other domestic or international proceedings (including other specific instances).
• whether the consideration of the specific issue would contribute to the purposes and effectiveness of the Guidelines.

27. Following its initial assessment, the NCP will respond to the parties concerned. If the NCP decides that the issue does not merit further examination, it will inform the parties of the reasons for its decision. A decision that a case warrants further examination does not mean that the issues raised have been given final consideration and does not imply any finding as to whether or not a company has acted in accordance with the Guidelines.

28. Where the issues raised merit further examination, the NCP would discuss the issue further with the parties involved and will offer “good offices” in an effort to contribute informally to the resolution of issues. Where relevant, NCPs will follow the procedures set out in paragraph C-2a) through C-2d). This could As part of good offices, the NCP may include seeking the advice of relevant authorities, as well as representatives of the business community, labour organisations, other non-governmental organisations, and experts, consistent with the NCP’s own case-handling procedures. Consultation with NCPs in other countries, or seeking information from the Secretariat or guidance from the WPRBC on issues related to the interpretation of the Guidelines, may also help to resolve the issue.
36. Through good offices, NCPs will offer a platform for dialogue between the parties to assist with the resolution of the issues raised. In line with the voluntary and non-judicial nature of the specific instance procedure, and subject to consent of the parties, the role of the NCP includes creating conditions for dialogue and agreement between the parties around a commitment by the enterprise to further the implementation of the Guidelines in the future and, where relevant, address, in accordance with the Guidelines, adverse impacts that may have occurred. While facilitating dialogue, the NCP should explain the provisions of OECD Guidelines relevant to the issues raised as a way to support parties in reaching an agreement compatible with the Guidelines. The NCP should assess whether the agreement negotiated during the good offices phase is in line with the Guidelines and, where relevant, engage with the parties to try and resolve any conflict.

29-37. As part of making available good offices, and where relevant to the issues at hand, NCPs will offer, or facilitate access to, consensual and non-adversarial procedures, such as mediation or conciliation or mediation, to assist in dealing with the issues at hand. In common with accepted practices on conciliation and mediation procedures, these procedures would be used only upon agreement of the parties concerned and their commitment to participate in good faith during the procedure. If mediation is the option chosen, NCPs may choose to carry out the mediation themselves or engage external mediators agreed by the parties to conduct or support mediation.

30. When offering their good offices, NCPs may take steps to protect the identity of the parties involved where there are strong reasons to believe that the disclosure of this information would be detrimental to one or more of the parties. This could include circumstances where there may be a need to withhold the identity of a party or parties from the enterprise involved.

Conclusion of the Procedures

31-38. NCPs are expected to always make the results of a specific instance publicly available in accordance with paragraphs I.C-34. and I.C-46. of the Procedural Guidance.

32-39. When the NCP, after having carried out its initial assessment, decides that the issues raised in the specific instance do not warrant further examination consideration, it will make a statement publicly available after consultations with the parties involved and taking into account the need to preserve the confidentiality of sensitive business and other information. If the NCP believes that, based on the results of its initial assessment, it would be unfair to publicly identify a party in a statement on its decision, it may draft the statement so as to protect the identity of the party.

33-40. The NCP may also make publicly available its decision that the issues raised merit further examination and its offer of good offices to the parties involved.

34-41. If the parties involved reach agreement on the issues raised, the parties should address in their agreement how and to what extent the content of the agreement is to be made publicly available. The NCP, in consultation with the parties, will make publicly available a report statement with the results of the proceedings. The NCP can make recommendations on the implementation of the Guidelines even if there is agreement or partial agreement between the parties. The parties may also agree to seek the assistance of the NCP in following-up on the implementation of the agreement and the NCP may do so on terms agreed between the parties and the NCP. 38--

35-42. If the parties involved fail to reach agreement on all or some of the issues raised, if one or both of the parties withdraws from the procedure, or if the NCP finds that one or more of the parties to the specific instance is unwilling to engage or to participate in good faith, the NCP will issue a statement, and make
recommendations as appropriate, on the implementation of the Guidelines in relation to the issues raised. This procedure makes it clear that an NCP will issue a statement, even when it feels that a specific recommendation is not called for. The statement should identify the parties concerned, the issues involved, the date on which the issues were raised with the NCP, any recommendations by the NCP, and any observations the NCP deems appropriate to include on the reasons why the proceedings did not produce an agreement.

43. Where appropriate and relevant to the resolution of the issues, the NCP may also, at its own discretion, if allowed by applicable national law and its case-handling procedures, set out its views in its final statement on whether the enterprise observed the Guidelines.

36-44. The NCP should provide an opportunity for the parties to comment on a draft statement. However, the statement is that of the NCP and it is within the NCP’s discretion to decide whether to change the draft statement in response to comments from the parties. If the NCP makes recommendations to the parties, it may be appropriate under specific circumstances for the NCP to follow up with the parties on their response to these recommendations.

[New sub-heading] Follow up

45. NCPs will carry out follow up on agreements they facilitate or recommendations they make where relevant. For example, follow up would not be conducted if it would not contribute to the implementation of the Guidelines. If the NCP deems it appropriate to follow up on its recommendations, the timeframe for doing so should be addressed in the statement of the NCP. Follow up may involve, for example, requests for updates from the parties, or one or more meetings between the NCP and the parties (either separately, or together) to assess progress on the implementation of the commitments undertaken in the agreement, or on the NCP’s recommendations. Where appropriate, the NCP should issue follow up statements after conducting its follow up. The NCP may also offer to resume good offices after follow up if further engagement by the NCP could help promote implementation of the Guidelines.

37. Statements and reports on the results of the proceedings made publicly available by the NCPs could be relevant to the administration of government programmes and policies. In order to foster policy coherence, NCPs are encouraged to inform these government agencies of their statements and reports when they are known by the NCP to be relevant to a specific agency’s policies and programmes. This provision does not change the voluntary nature of the Guidelines.

Transparency and Confidentiality

38-46. Transparency is recognised as a general principle for the conduct of NCPs in their dealings with the public (see paragraph 9 in “Core Effectiveness Criteria” section, above). However, paragraph LC-45 of the Procedural Guidance recognises that there are specific circumstances where maintaining confidentiality of certain facts and arguments brought forward by the parties is important. For example, the NCP will take appropriate steps to protect sensitive business information. Equally, other information, such as the identity of individuals involved in the procedures, should be kept confidential for example if disclosing it places them or related persons at risk of retaliation, in the interests of the effective implementation of the Guidelines. It is understood that proceedings include the facts and arguments brought forward by the parties. Nonetheless, it remains important to strike a balance between transparency and confidentiality in order to build confidence in the Guidelines procedures and to promote their effective implementation. It is recognised that NCPs may be obligated to follow national laws on transparency and disclosure, regardless of these provisions. Thus, while paragraph C-4 broadly outlines that the proceedings associated with
implementation will normally be confidential, the results will normally be transparent.

47. With respect to sharing information between parties, in the interest of an equitable process, the NCP should, in principle, make parties aware of all relevant facts and arguments brought forward to the NCP by the other parties during proceedings (in particular during the good offices phase). For example, if a party makes a reasonable request not to share a submission in full with the other party, notably to protect sensitive business information and the interests of other stakeholders, the NCP should work with the submitting party to redact any sensitive content in order to facilitate sharing. As much as possible, NCPs should avoid basing fundamental aspects of their decisions on information that is not available to both parties.

48. With respect to sharing information with the public or third parties, the specific instance proceedings will be confidential unless otherwise agreed by the parties. In particular, NCPs will inform parties at the outset of the process that they may not disclose at any time facts and arguments shared during the proceedings by the other party or by the NCP itself that is not already in the public domain without the other party’s consent. In the interest of predictability, trust and confidence, NCPs may seek written assurances from the parties in this regard, and adopt provisions in their case-handling procedures that encourage compliance with their non-disclosure requests. The Procedures do not prevent the submitter from publishing its own initial submission, nor do they prevent the parties from communicating about the existence of the specific instance, or discussing information or documents shared by the other party with their advisors to the specific instance, provided these advisors do not themselves further disclose such information. In such cases, the NCP may also seek written assurances from the advisors.

Issues Arising in Non-Adhering Countries

49. As noted in paragraph 2 of the Concepts and Principles chapter, enterprises are encouraged to observe the Guidelines wherever they operate, taking into account the particular circumstances of each host country.

- In the event that Guidelines-related issues arise in a non-adhering country, home NCPs will take steps to develop an understanding of the issues involved. While it may not always be practicable to obtain access to all pertinent information, or to bring all the parties involved together, the NCP may still be in a position to pursue enquiries and engage in other fact finding activities. Examples of such steps could include contacting the management of the enterprise in the home country, and, as appropriate, embassies and government officials in the non-adhering country.

- Conflicts with host country laws, regulations, rules and policies may make effective implementation of the Guidelines in specific instances more difficult than in adhering countries. As noted in the commentary to the General Policies chapter, while the Guidelines extend beyond the law in many cases, they should not and are not intended to place an enterprise in a situation where it faces conflicting requirements.

- The parties involved will have to be advised of the limitations inherent in implementing the Guidelines in non-adhering countries.

- Issues relating to the Guidelines in non-adhering countries could also be discussed at NCP meetings with a view to building expertise in handling issues arising in non-adhering countries.

Indicative Timeframe

50. The specific instance procedure comprises three five different stages:

1. Coordination: Where relevant, coordinate with other relevant NCPs based on the characteristics of the Specific Instance received to determine the lead NCP. Initial coordination arrangements to identify the lead and supporting NCPs should be completed within two months.
1. Initial assessment and decision whether to offer good offices to assist the parties: NCPs should seek to conclude an initial assessment within three months after the identification of the lead and supporting NCPs, although additional time might be needed in order to collect or translate information necessary for an informed decision.

2. Assistance to the parties in their efforts to resolve the issues raised: If an NCP decides to offer its good offices, it should strive to facilitate the resolution of the issues in a timely manner. Recognising that progress through good offices, including mediation and conciliation, ultimately depends upon the parties involved, the NCP should, after consultation with the parties, establish a reasonable timeframe for the discussion between the parties to resolve the issues raised. If they fail to reach an agreement within this timeframe, the NCP should consult with the parties on the value of continuing its assistance to the parties; if the NCP comes to the conclusion that the continuation of the procedure is not likely to be productive, it should conclude the process and proceed to prepare a statement.

3. Conclusion of the procedures: The NCP should strive to issue its statement or report within three months after the conclusion of the procedure.

4. Follow up: The NCP may determine its own timetable for any follow-up in consultation with the parties.

5. Reporting to the WPRBC and the Investment Committee

4.51. As a general principle, NCPs should strive to conclude the procedure within 12 months (14 months if coordination to determine a lead NCP is needed) from receipt of the specific instance to its conclusion. It is recognised that this timeframe may need to be extended if circumstances warrant it, such as when the issues arise in a non-adhering country, when the Specific Instance involves multiple enterprises, multiple submitters and multiple NCPs, or when translations are necessary. Whenever delays are to be expected or experienced in the handling of a Specific Instance, the NCP should ensure the parties are kept informed in a timely manner and that the proceedings remain predictable. The NCP, within its case-handling procedures, may decide to issue public updates on the status of cases.

Reporting to the WPRBC and the Investment Committee

4252. Reporting would be is an important responsibility of NCPs that would also help to build up a knowledge base and core competencies in furthering the effectiveness of the Guidelines. In this light, NCPs will submit their annual report to the WPRBC and the Investment Committee in order to include in the Annual Report on the OECD Guidelines information on all specific instances that have been initiated by parties, including those that are in the process of an initial assessment, those for which offers of good offices have been extended and discussions are in progress, and those in which the NCP has decided not to extend an offer of good offices after an initial assessment. The WPRBC will provide the Committee with an analysis of NCP annual reports to include in the Annual Report on the Guidelines. NCP annual reports should include Specific Instances in Coordination, Initial Assessment, Good offices, Conclusion or Follow-up. In reporting on implementation activities in specific instances, NCPs will comply with transparency and confidentiality considerations as set out in paragraph 1C-45 and in their case-handling procedures.

[New sub-heading] Support for policies to promote RBC
53. Statements and reports on the results of the proceedings made publicly available by the NCPs could be relevant. The Decision recognises the support NCPs can provide in the development, administration and coherence of government policies and programmes that promote RBC and policies, in order to foster policy coherence, where appropriate and in agreement with relevant government agencies. In particular, NCPs can support the alignment of any such efforts with the Guidelines and contribute to maintaining their position as an international standard for RBC, as well as other OECD instruments and guidance deriving from the Guidelines, such as the OECD due diligence guidance.

54. There are various ways in which NCPs may support their government in its efforts to develop, implement and foster coherence of policies to promote RBC, depending on context. First, NCPs are encouraged to inform those—relevant government agencies by sharing—of their statements and reports, as well as other data, surveys and insights, when they are known by the NCP to be relevant to a specific agency’s policies and programmes, such as trade advocacy, economic diplomacy, or other support and services to companies. Second, adhering countries have found it useful to involve their NCP in developing and implementing policies or programmes such as National Action Plans on RBC and/or Business and Human Rights. This provision does not change the voluntary nature of the Guidelines, and any support provided by the NCP should be commensurate with its capacities and priorities, and should not detract from its ability to fulfil its responsibilities under the Decision and the Procedural Annex.

II. Commentary on the Procedural Guidance for the Investment Committee, the WPRBC and the Secretariat

43. The Procedural Guidance to the Council Decision provides additional guidance to the Committee, the WPRBC and the Secretariat in carrying out its responsibilities, including:

- Discharging its responsibilities in an efficient and timely manner.
- Considering requests from NCPs for assistance, including by providing clarifications, guidance and information on the interpretation of the Guidelines in specific instances.
- Holding exchanges of views on the activities of NCPs.
- Providing for the possibility of seeking advice from international partners and experts.

44. The non-binding nature of the Guidelines precludes the Committee from acting as a judicial or quasi-judicial body. Nor should the findings and statements made by the NCP (other than interpretations of the Guidelines) be questioned by a referral to the Committee. The provision that the Committee shall not reach conclusions on the conduct of individual enterprises has been maintained in the Decision itself.

45. The Secretariat and the WPRBC Committee will consider requests from NCPs for assistance, including in the event of doubt about the interpretation of the Guidelines in ongoing specific instances particular circumstances. In such situations, NCPs should first contact the Secretariat for information regarding interpretation of the Guidelines in similar cases. Where such information is not available or insufficient to assist the NCP, or the Secretariat is not in a position to assist the NCP, the NCP may seek the guidance of the WPRBC. Such requests will be handled confidentially and, subject to available resources, expeditiously. To expedite the treatment of requests for guidance, the WPRBC may organise ad hoc meetings or establish a sub-group to respond to such requests. In such case, the WPRBC will develop procedures to be followed by the sub-group. The information provided by the Secretariat and the guidance of the WPRBC are confidential, case-specific and advisory. The Secretariat will report regularly to the WPRBC, and the WPRBC will
report regularly to the Investment Committee, on issues that gave rise to requests for information and guidance, and on responses provided, with due regard for confidentiality. If the WPRBC considers that a question on which guidance is sought requires a clarification of the interpretation of the Guidelines, it will invite the NCP to seek a clarification from the Committee on the basis of Section II.2.c) of the Procedures. This paragraph reflects paragraph C.2c) of the Procedural Guidance to the Council Decision pertaining to NCPs, where NCPs are invited to seek the guidance of the Committee if they have doubt about the interpretation of the Guidelines in these circumstances.

58. [moved from former 48] Clarifications of the meaning interpretation of the Guidelines under Section II.2.c) of the Procedural Guidance, remain a key responsibility of the Committee to ensure that the meaning interpretation of the Guidelines would not vary from country to country. A substantiated submission request for clarification may be filed by an adhering country, an advisory body (BIAC or TUAC) or OECD Watch, including with respect to whether an NCP has correctly interpreted aion of the Guidelines or a previous clarification is consistent with Committee clarification interpretation will also be considered in a closed specific instance. The Committee’s clarification will be prepared by the WPRBC with the support of the Secretariat, in accordance with procedures to be defined by the Committee, and be made public on the OECD’s website. The Investment Committee will not reach conclusions on the conduct of individual enterprises in issuing its clarification, and NCPs are not expected to re-open a specific instance as a result of a clarification.

46.59. When discussing NCP activities, the Committee may make recommendations, as necessary, to improve their functioning, including with respect to the effective implementation of the Guidelines and to address any situation in which an NCP becomes non-functioning. In particular, the Investment Committee may determine, based on an NCP’s last two annual reporting cycles and upon a proposal by the WPRBC, that an NCP has, for an extended period of time and without legitimate reason, manifestly not been operating in a way consistent with the Procedures. Such a finding may rest on, for example, the repeated failure to assign the resources required for the basic discharge of NCP responsibilities, demonstrably inadequate institutional arrangements, absence of any promotional activities, repeated and significant undue delays in the handling of specific instances, or lack of reporting. The Committee may then make recommendations to the country of the NCP and invite it to report on implementation within a specified timeframe and make further recommendations in case such reporting does not satisfy the Committee that the NCP is functioning in a way consistent with the Procedures. The Committee may request the Secretariat to assist the adhering country in the implementation of the recommendations. The adhering country whose NCP is the subject of a substantiated submission should participate in the process in good faith and is expected not to block consensus except in exceptional circumstances.

47. 60. A substantiated submission by an adhering country, an advisory body or OECD Watch that an NCP was not fulfilling its procedural responsibilities in the implementation of the Guidelines in specific instances will also be considered by the Committee. The Committee’s response will be prepared by the WPRBC with the support of the Secretariat, in accordance with procedures defined by the Committee. It will be approved by consensus. The adhering country whose NCP is the subject of a substantiated submission should participate in the process in good faith and is expected not to block consensus except in exceptional circumstances. The Committee will give the adhering country in question the possibility to state its view on the substantiated submission prior to its decision, and the Committee may invite the adhering country to report on the implementation of any recommendations within twelve months of the response.
49-61. In order to engage with non-adhering countries on matters covered by the Guidelines, the Committee may invite interested non-adhering countries to its meetings, annual Roundtables on Corporate Responsibility, and meetings relating to specific projects on responsible business conduct.

50-61. Finally, the Committee and the WPRBC may wish to call on experts to address and report on broader issues (for example, child labour or human rights) or individual issues, or to improve the effectiveness of procedures. For this purpose, the Committee could call on OECD in-house expertise, international organisations, the advisory bodies (BIAC and TUAC), OECD Watch, non-governmental organisations, academics and others. It is understood that this will may not become a panel to settle individual issues.
